

NUMERICAL METHODS - II

Solution of Algebraic and Transcendental Equations

Preliminaries:

A problem of great importance in science and engineering is that of determining the roots/zeros of an equation of the form $f(x) = 0$.

A polynomial equation of the form

$$f(x) = a_0 x^n + a_1 x^{n-1} + a_2 x^{n-2} + \dots + a_{n-1} x + a_n = 0$$

is called an **algebraic equation**. An equation which contains polynomials, exponential functions, trigonometric functions and logarithmic functions etc. is called transcendental equation.

Initial approximation for an iterative procedure:

We use the following theorem of calculus to determine an initial approximation. It is also called intermediate value theorem.

Theorem : If $f(x)$ is continuous on some interval $[a, b]$ and $f(a) f(b) < 0$, then the equation $f(x) = 0$ has at least one real root or an odd number of real roots in the interval (a, b) .

BISECTION METHOD

For definiteness, let $f(a)$ be negative and $f(b)$ be positive. Then the root lies between a and b and let its approximate value be given by

$x_0 = \frac{a+b}{2}$. If $f(x_0) = 0$, we conclude that x_0 is a root of the equation $f(x) = 0$. Otherwise the root lies between x_0 and b or between x_0 and a depending on whether $f(x_0)$ is positive or negative. We designate this new interval as $[a_1, b_1]$ whose length is $\frac{|b-a|}{2}$, as

applications was small capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult. The HiNC2 conference attempted to help in this endeavor. **Engineering Mathematics - III, Volume 2** M. D.

PETALE, 2018-04-10 Purpose of this Book The purpose of this book is to supply lots of examples with detailed solutions that helps the students to understand each example step wise easily and get rid of the College assignments phobia. It is sincerely hoped that this book will help and better equip the higher secondary students to prepare and face the examinations with better confidence. I have endeavored to present the book in a lucid manner which will be easier to understand by all the engineering students. About the Book Many books have been written on Engineering Mathematics by different authors and teachers in India but majority of the students find it difficult to fully understand the examples in these books. Also the Teachers have faced many problems due to paucity of time and classroom workload. Sometimes the college teacher is not able to help their own student in solving many difficult examples in the class even though they wish to do so. Keeping in mind the need of the students the author was inspired to write a suitable text book providing solutions to various examples of Engineering Mathematics III Volume 1 and Volume 2. Preface It gives me great pleasure to present to you this book on A Textbook of Engineering Mathematics III Volume 1 presented specially for you. Many books have been written on Applied Mathematics by different authors and teachers in India but majority of the students find it difficult to fully understand the examples in these books. Also the Teachers have faced many problems due to paucity of time and classroom workload. Sometimes the college teacher is not able to help their own student in solving many difficult examples in the class even though they wish to do so. Keeping in mind the need of the students the author was inspired to write a suitable text book providing solutions to various examples of Engineering Mathematics III Volume 1. It is hoped that this book will meet more than adequately the needs of the students they are meant for. I have tried our level best to make this book error free.

in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform
mathematical calculations and assist mathematicians and engineers in scientific problem solving The early computers of the
Nordic countries emerged during the 1950s and had names like BARK BESK DASK SMIL SARA ESKO and NUSSE Each of
them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified
professionals However one should not forget the punched card machine technology at this time that had existed for several
decades In addition we have a Nordic name namely Frederik Rosing Bull contributing to the fundamentals of punched card
technology and forming the French company Bull Commercial products such as FACIT EDB and SAAB D20 series computers
in Sweden the Danish GIER computer the Nokia MIKKO computer in Finland as well as the computers of Norsk Data in
Norway followed the early computers In many cases however companies and institutions did not further develop or exploit
Nordic computing hardware even though it exhibited technical advantages Consequently in the 1970s US computers
primarily from IBM flooded the Nordic market Survey of Applicable Mathematics K. Rektorys,2013-12-19 This major two
