Gardner,T. Allan Pryor,2013-03-12 This monograph series is intended to provide medical information scientists health care administrators health care providers and computer science professionals with successful examples and experiences of computer applications in health care settings Through the exposition of these computer applications we attempt to show what is effective and efficient and hopefully provide some guidance on the acquisition or design of information systems so that costly mistakes can be avoided The health care industry is currently being pushed and pulled from all directions from the clinical side to increase quality of care from the business side to improve financial stability from the legal and regulatory sides to provide more detailed documentation and in a university environment to provide more data for research and improved opportunities for education Medical information systems sit in the middle of all these demands They are not only asked to provide more better and more timely information but also to interact with and monitor the process of health care itself by providing clinical reminders warnings about adverse drug interactions alerts to questionable treatment alarms for security breaches mail messages workload schedules etc Clearly medical information systems are functionally very rich and demand quick response time and a high level of security They can be classified as very complex systems and from a developer's perspective as risky systems *Mental Health Computing* Marvin J. Miller,Henric W. Hammond,Matthew J.

Hile,2012-12-06 Increasingly more computer applications are becoming available to assist mental health clinicians and administrators in patient evaluation and treatment and mental health management education and research Topics covered include automated assessment procedures MR E The Mental Retardation Expert computerized assessment system for psychotherapy evaluation and research computer assisted therapy of stress related conditions computerized patient evaluation in a clinical setting computerized treatment planning the VA national mental health database networks managed care DSM IV diagnosis quality management cost control knowledge coupling telemedicine the clinical library assistant and monitoring independent service providers Decision Support Systems in Critical Care M.Michael Shabot,Reed M.

Gardner,2012-12-06 Modern critical care is characterized by the collection of large volumes of data and the making of urgent patient care decisions The two do not necessarily go together easily For many years the hope has been that ICU data management systems could play a meaningful role in ICU decision support These hopes now have a basis in fact and this

book details the history methodology current status and future prospects for critical care decision support systems By focusing on real and operational systems the book demonstrates the importance of integrating data from diverse clinical data sources the keys to implementing clinically usable systems the pitfalls to avoid in implementation and the development of effective evaluation methods

Knowledge Engineering in Health Informatics Homer R. Warner, Dean K. Sorenson, Omar Bouhaddou, 2012-12-06 This monograph series is intended to provide medical information scientists health care administrators physicians nurses other health care providers and computer science professionals with successful examples and experiences of computer applications in health care settings Through these computer applications we attempt to show what is effective and efficient and hope to provide guidance on the acquisition or design of medical information systems so that costly mistakes can be avoided Health care provider organizations such as hospitals and clinics are experiencing large demands for clinical information because of a transition from a fee for service to a capitation based health care economy This transition changes the way health care services are being paid for Previously nearly all health care services were paid for by

insurance companies after the services were performed Today many procedures need to be pre approved and many charges for clinical services must be justified to the insurance plans Ultimately in a totally capitated system the more patient care services are provided per patient the less profitable the health care provider organization will be Clearly the financial risks have shifted from the insurance carriers to the health care provider organizations For hospitals and clinics to assess these financial risks management needs to know what services are to be provided and how to reduce them without impacting the quality of care The balancing act of reducing costs but maintaining health care quality and patient satisfaction requires accurate information about the clinical services
