The Nursing Informatics Implementation Guide Eleanor Callahan Hunt, Sara Breckenridge Sproat, Rebecca Rutherford Kitzmiller, 2013-03-09. Health institutions are investing in and fielding information technology solutions at an unprecedented pace. With the recommendations from the Institute of Medicine around information technology solutions for patient safety, mandates from industry groups such as Leapfrog about using information systems to improve health care, and the move toward evidence-based practice, health institutions cannot afford to retain manual practices. The installation of multi-million dollar computerized health systems represents the very lifeblood of contemporary clinical operations and a crucial link to the financial viability of institutions. Yet the implementation of health information systems is exceptionally complex, expensive, and often just plain messy. The need for improvement in the art and science of systems implementation is clear: up to 70-80% of information technology installations fail. The reasons are multifaceted, ranging from the complexity of the diverse workflows being computerized, the intricate nature of health organizations, the knowledge and skills of users, to other reasons such as strategies for obtaining key executive support, weaving through the politics peculiar to the institution, and technical facets including the usability of systems. Thus the art and science of successfully implementing systems remains deeply layered in elusiveness. Still, given the pervasiveness of system implementations and the importance of the outcomes, this is a critical topic, especially for nurses and informatics nurse specialists.

Internet, Telematics, and Health Marcelo C. Sosa-Iudicissa, 1997. This book is the final result of a team effort involving a large number of international experts coordinated and led by Dr. Marcelo Sosa Iudicissa in Brussels, Dr. Nora Oliveri in Buenos Aires, Dr. Carlos A. Gamboa in Washington, and Ms. Jean Roberts in England. They have attracted and assembled together the contributions of 80 specialists from over 20 countries in North America, Europe, and Latin America. This makes the present book a unique publication presenting a true global vision of the opportunities opened up by the advent of the Internet for doctors, health professionals, planners, and managers, as well as for patients and the public at large, wanting to know more and better about their own health maintenance and protection. It also presents a range of informatics and telematics applications available nowadays to medicine, examples on how people with a health concern are using the Internet in both industrialized and developing countries. This change, bringing empowerment through knowledge, is showing us the trend towards a New Health Paradigm in the Information Society. This book is aimed at medical practitioners, administrators, teachers, and students who wish an authoritative state of the art, as well as how to, for commencing or enhancing what is done on the Internet. A self-contained CD-ROM is included with the book, providing readers with a flying start in accessing key
