Minnesota Technolog ,1929 Darwin, Divinity, and the Dance of the Cosmos Bruce Sanguin,2007 In March 2005 the United Nations released its Millennium Ecosystem Assessment Among the findings 2 3 of the world s ecosystems are seriously degraded 90 percent of the world s fish stocks are depleted and climate change is not just something that might happen it is already upon us Many people including many Christians will hear this and delude themselves into thinking that technology can and will save the day A wiser and more helpful response especially for Christians is to find a way to step back into the flow of nature from which we have extricated ourselves In Darwin Divinity and the Dance of the Cosmos Bruce Sanguin shows us the way Sanguin draws on the latest scientific understandings of the nature of the universe and weaves them together with biblical meta narratives and frequently overlooked strands of the Judeo Christian tradition to create an ecological and truly evolutionary Christian theology a feat few theologians have even attempted This book and more importantly the work of integration it suggests represents a fundamental challenge to our theological and liturgical models But for those who are ready and willing to embark on an exciting theological journey of discovery it also represents a rich opportunity to become reacquainted with the Spirit of God moving in and through the very dynamics of an unfolding universe In Darwin Divinity and the Dance of the Cosmos Sanguin draws on the latest scientific understandings of the nature of the universe and weaves them together with biblical meta narratives and frequently overlooked strands of the Judeo Christian

tradition to create an ecological and truly evolutionary Christian theology **Contemporary Literary Critics** NA

S. Kragh,2016-04-29 Entropic Creation is the first English language book to consider the cultural and religious responses to
the second law of thermodynamics from around 1860 to 1920 According to the second law of thermodynamics as formulated
by the German physicist Rudolf Clausius the entropy of any closed system will inevitably increase in time meaning that the
system will decay and eventually end in a dead state of equilibrium Application of the law to the entire universe first
proposed in the 1850s led to the prediction of a future heat death where all life has ceased and all organization dissolved In
the late 1860s it was pointed out that as a consequence of the heat death scenario the universe can have existed only for a

finite period of time According to the entropic creation argument thermodynamics warrants the conclusion that the world once begun or was created It is these two scenarios allegedly consequences of the science of thermodynamics which form the core of this book The heat death and the claim of cosmic creation were widely discussed in the period 1870 to 1920 with participants in the debate including European scientists intellectuals and social critics among them the physicist William Thomson and the communist thinker Friedrich Engels One reason for the passion of the debate was that some authors used the law of entropy increase to argue for a divine creation of the world Consequently the second law of thermodynamics became highly controversial In Germany in particular materialists and positivists engaged in battle with Christian mostly Catholic scholars over the cosmological consequences of thermodynamics This heated debate which is today largely forgotten is reconstructed and examined in detail in this book bringing into focus key themes on the interactions between cosmology physics religion and ideology and the public way in which these topics were discussed in the latter half of the nineteenth and the first years of the twentieth century
