Reduziert die Redoxreaktionen des Alkanes (Oxidationszustand und C^0 negativ) und erhält einen negativen Potenzialzustand für das C-Atom unter Verwendung eines Reduktionsmittels (z.B. Wasserstoffwasserstoff oder Eisen(II)-Sulfat). Dies ist eine wichtige Reaktion, um Alkane zu anderen Stoffen wie Alkenen, Alkinen, Alkanen mit einem Sauerstoffatom oder Alkanen mit einem Wasserstoffatom zu reduzieren.

Streamlining Free Radical Green Chemistry V. Tamara Perchyonok,Ioannis Lykakis,Al Postigo,2012

The environmental and health hazards created by industrial chemicals and consumer products must be minimized For safer products to be designed the relationships between structure and toxicity must be understood at the molecular level Green chemistry combined with free radical research has the potential to offer innovative solutions to such problems Some solutions are greener than others and many necessitate significant financial investment New technology will only be adopted if real benefit can be shown and sometimes adaptation of existing methods is the best option The efficiency of processes must be assessed not only in terms of the final yield but also cost environmental impact and waste toxicity This practical and concise guide showcases the sustainable methods offered by green free radical chemistry and summarizes the fundamental

science involved It discusses the pros and cons of free radical chemistry in aqueous systems for synthetic applications All transformation steps are covered including initiation propagation and termination Useful background knowledge is combined with examples including industrial scale processes for pharmaceuticals and fine chemicals The book helps chemists to choose appropriate methods for achieving maximum output using a modern environmentally conscious approach It shows that armed with an elementary knowledge of kinetics an understanding of the mechanistic and technical aspects and some common sense it is possible to harness free radicals for use in a broad range of applications Streamlining Green Free Radical Chemistry is aimed at chemists engineers materials scientists biochemists and biomedical experts as well as undergraduate and postgraduate students It encourages readers to question conventional methods and move towards the Benign by Design approach of the future References to further reading are provided at the end of each chapter
