Radio Amateurs Handbook:

The Radio Amateur's Hand Book A. Frederick Collins, 2016-08-13 Before delving into the mysteries of receiving and sending messages without wires a word as to the history of the art and its present day applications may be of service While popular interest in the subject has gone forward by leaps and bounds within the last two or three years it has been a matter of scientific experiment for more than a quarter of a century The wireless telegraph was invented by William Marconi at Bologna Italy in 1896 and in his first experiments he sent dot and dash signals to a distance of 200 or 300 feet The wireless telephone was invented by the author of this book at Narberth Penn in 1899 and in his first experiments the human voice was transmitted to a distance of three blocks The first vital experiments that led up to the invention of the wireless telegraph were made by Heinrich Hertz of Germany in 1888 when he showed that the spark of an induction coil set up electric oscillations in an open circuit and that the energy of these waves was in turn sent out in the form of electric waves He also showed how they could be received at a distance by means of a ring detector which he called a resonator
