Effects of Low Dose and Low Dose Rate Radiation Oddvar F. Nygaard, Warren K. Sinclair, John T. Lett, 2013-10-22

Advances in Radiation Biology Volume 6 Effects of Low Dose and Low Dose Rate Radiation examines the biological effects of low dose and low dose rate ionizing radiation on a broad scale covering various articles from microdosimetry to analyses of human responses Estimates of the effects on humans from low doses or from sustained exposures to low dose rates of ionizing radiations are of critical importance for the assessment of radiation risks under occupational and environmental conditions This book consists of such knowledge that is essential for radiation protection and governmental regulatory activities pertaining to radiation exposure This volume is intended for radiobiologists radiation epidemiologists radiation physicists radiation safety personnel health officials and individuals involved in regulatory activities Instructor's Manual

Noz, Gerald Q. Maguire, 1985

**Biological Aspects of Radiation Protection** T. Sugahara, O. Hug, 1971 In the maintenance and development of sound standards of radiation protection many types of enquiry are important These range from the purely technical examination of the ways in which exposure may occur or radionuclides may enter the body under existing or new conditions of occupational activity to the most fundamental studies of the interaction of high energy particulate radiation with matter or the metabolic localisation and kinetics of unfamiliar radionuclides One of the most important and most basic problems however is to establish a quantitative estimate for the frequency with which various types of injury would be induced in man following exposure to low doses of radiation delivered at low dose rates No sound limits can be proposed for appropriately safe levels of occupational or population exposure unless the associated hazard or its maximum likely value can be at least approximately assessed It is one of the most important tasks of those concerned with radiation protection that these criteria should be kept under constant review in the light of developing knowledge and that the fields in which further information is needed should be defined and described
