Rain Forests Reefs:

Rain Forests and Reefs Caitlin Maynard,Thane Maynard,1997-03-01 Describes a fieldtrip that eighteen students and seven adults took to study the ecosystems of a tropical rain forest and a coral reef in Belize *Reefs and Rain Forests* Murray S. Kaufman,2002 For more than seven years Murray S Kaufman has photographed the powerful contrasts and similarities of two unique environments which he describes as the last living Eden The book combines Kaufman s images of the beauty and fragility of these important primal and endangered ecosystems with texts by leading experts in the field Together they depict a phenomenal array of flora and fauna including some newly discovered species Throughout the book gives an insight into the effects of rapid development and habitat destruction threatening reefs and rain forests At the same time it touches our hearts providing the first step to discover and appreciate nature Kaufman s book opens the way for a new understanding and a new commitment to conservation of these rain forests and coral reefs Reef and Rainforest Michael McCoy,2010-10-01 Reef and Rainforest is a photographic portrayal of marine and terrestrial life in one of the world s most biodiverse regions the tropics of north eastern Australia together with the South Pacific nations of Solomon Islands and Papua New Guinea The photographs were taken over a period of more than 30 years while the author was living in the Solomon Islands and northern Australia They depict life on the coral reefs in the rainforests and in adjacent tropical savannahs From detailed macro studies to sweeping scenics and aerials the photographs are impressive for both their technical compositional expertise and the unique insight they provide into the behavioural nuances of marine and terrestrial wildlife Almost all the wildlife images are of free living non posed subjects photographed as they were encountered Along with the stunning photography the detailed and reflective captions are drawn from the author s experiences Reef and Rainforest conveys the richness and diversity of the natural world with maximum visual impact **Biodiversity II** Marjorie L. Reaka-Kudla,Don E. Wilson,Edward O. Wilson,1996-09-30 The book before you carries the urgent warning that we are rapidly altering and destroying the environments that have fostered the diversity of life forms for more than a billion years With those words Edward O Wilson opened the landmark volume Biodiversity National Academy Press 1988 Despite this and other such alarms species continue to vanish at a rapid rate taking with them their genetic legacy and potential benefits Many disappear before they can even be identified Biodiversity II is a renewed call for urgency This volume updates readers on how much we already know and how much remains to be identified scientifically It explores new strategies for quantifying understanding and protecting biodiversity including New approaches to the integration of electronic data including a proposal for a U S National Biodiversity Information Center Application of techniques developed in the human genome project to species identification and classification The Gap Analysis Program of the National Biological Survey which uses layered satellite climatic and biological data to assess distribution and better manage biodiversity The significant contribution of museum collections to identifying and categorizing species which is essential for understanding ecological

function and for targeting organisms and regions at risk The book describes our growing understanding of how megacenters of diversity e g rainforest insects coral reefs are formed maintained and lost what can be learned from mounting bird extinctions and how conservation efforts for neotropical primates have fared It also explores ecosystem restoration sustainable development and agricultural impact Biodiversity II reinforces the idea that the conservation of our biological resources is within reach as long as we pool resources better coordinate the efforts of existing institutions museums universities and government agencies already dedicated to this goal and enhance support for research collections and training This volume will be important to environmentalists biologists ecologists educators students and concerned individuals

Encyclopedia of Modern Coral Reefs David Hopley, 2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs

Vertebrates in Complex Tropical Systems Mireille L. Harmelin-Vivien, Francois Bourliere, 2012-12-06 This book addresses the question of what determines species richness in tropical animals by comparing and contrasting the communities of the five major classes of vertebrates in two environments considered to be the most species rich on Planet Earth the coral reef and the rainforest All the contributors were asked to examine how so many species could coexist in such communities and to discuss the ways species assemblages might have evolved over time Because the coauthors are ecologists emphasis is quite naturally placed on the first of these two questions and the factors contributing to the maintenance of a diversity are discussed at length However the question of the very origin of species richness can never be eluded though it is more an evolutionary problem than an ecological one it has therefore also been given some attention occasionally Since we believe that long term descriptive data and extended field experience are absolutely essential to formulate meaningful questions and propose realistic models contributors were selected on the basis of their prolonged field

practice all of them actually spent years in the field and or participated in long term research programs The present volume has its origin in a symposium held on August 15 1986 at Syracuse New York during the Fourth International Congress of Ecology
