It was a lucky twist of fate when in the early 1980s David Levy a writer and amateur astronomer joined up with the famous scientist Eugene Shoemaker and his wife Carolyn to search for comets from an observation post on Palomar Mountain in Southern California Their collaboration would lead to the 1993 discovery of the most remarkable comet ever recorded Shoemaker Levy 9 with its several nuclei five tails and two sheets of debris spread out in its orbit plane A year later Levy would be by the Shoemakers side again when their comet ended its four billion year long journey through the solar system and collided with Jupiter in the most stunning astronomical display of the century Not only did this collision revolutionize our understanding of the history of the solar system but it also offered a spectacular confirmation of one scientist's life work As a close friend and colleague of Shoemaker who died in 1997 at the age of 69 Levy offers a uniquely insightful account of his life and the way it has shaped our thinking about the universe Early in his training as a geologist Shoemaker suspected that it wasn't volcanic activity but rather collisions with comets and asteroids that created most of the craters on the moon and most other bodies in the solar system Convincing the scientific community of the plausibility of impact theory and revealing its power for penetrating mysteries such as the extinction of the dinosaurs and the timing of the Earth's eventual demise became Shoemaker's mission Through conversations with Shoemaker and his family Levy reconstructs the journey that began with a young geologist's serious desire to go to the moon in the late 1940s Sent by the government to find a way to harvest plutonium Shoemaker instead found evidence in desert craters for what became his impact theory While he never became an astronaut he did become the first geologist hired by NASA and subsequently set the research agenda for the first manned lunar landing After a series of victories and setbacks for Shoemaker the collision of Shoemaker Levy 9 with Jupiter provided the most convincing proof to date of the role of impacts in our solar system Levy's explanation of the scientific reasoning that guided Shoemaker in his career up to this dramatic point as well as his personal portrait of a man who found white water rafting to be an easy way to relax sets these fascinating events in a human scale This biography shows what

G. Jung, Wolfgang Pauli, 2022-04-18 This book includes essays that emphasize the part played by pre-existing images or archetypes in the development of concepts and scientific theories and stress the need for complementary principles in nature. It is a translation of *Synchronizität als ein Prinzip akausaler Zusammenhänge*. In 1952 Carl Jung and Wolfgang Pauli, both at the height of their reputations, co-wrote *The Interpretation of Nature and the Psyche*. It contained one essay by each author. Jung's presents a challenge to mainstream science and advances the principle of synchronicity and Pauli's argues for a more holistic conception of modern science. Roderick Main presents the original essays here with a brand new introduction and commentary which reviews how the original text was viewed and which traces the subsequent influences of both the essays and the two authors. *Archives internationales d'ethnographie* ,1918 The Family treasury of Sunday reading, ed. by A.
