This book is a collection of essays that explore the different ways in which landscapes are studied and understood. The authors come from a variety of disciplines including anthropology, geography, history, and environmental studies. They offer a wide range of perspectives on landscapes, from the role they play in shaping cultural identity to the impact they have on our physical and mental health. Readers will gain a deeper understanding of the importance of landscapes and the need to protect and preserve them. This book is essential reading for anyone interested in the environment, culture, or the human experience. Landscapes are more than just scenery. They are living, breathing entities that are constantly changing and evolving. They are home to a vast array of plants and animals, and they provide us with a wide range of resources. Landscapes also play a vital role in regulating the climate and providing us with clean air and water. In short, landscapes are essential for life on Earth. They are also a source of great beauty and inspiration. We hope that this book will help readers to appreciate the importance of landscapes and to work to protect them for future generations. Stephen Spender, 1978 **Neutrosophic Sets and Systems, vol. 78/2025** Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva-Vázquez, 2025-02-15. Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy: neutrosophic set, neutrosophic logic, neutrosophic probability, neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra, geometry, topology, etc. Neutrosophy is a new branch of philosophy that studies the origin, nature, and scope of neutralities, as well as their interactions with different ideational spectra. This theory considers every notion or idea together with its opposite or negation and with their spectrum of neutralities in between them, i.e., notions or ideas supporting neither nor. The and ideas together are referred to as Neutrosophy. It is a generalization of Hegel's dialectics; the last one is based on and only. According to this theory, every idea tends to be neutralized and balanced by and ideas as a state of equilibrium. In a classical way, they are disjoint two by two. But since in many cases the borders between notions are vague and imprecise, Sorites, it is possible that two of course have common parts two by two or even all three of them as well. Neutrosophic Set and Neutrosophic Logic are generalizations of the fuzzy set and respectively fuzzy logic, especially of intuitionistic fuzzy set and respectively intuitionistic fuzzy logic. In neutrosophic logic, a proposition has a degree of truth T , a degree of indeterminacy I , and a degree of falsity F , where T, I, F are standard or non-standard subsets of $[0, 1]$. Neutrosophic Probability is a generalization of the classical probability and imprecise probability. Neutrosophic Statistics is a generalization of the classical statistics. What distinguishes the neutrosophics from other fields is the which means neither nor, which of course depends on, can be indeterminacy, neutrality, tie game, unknown, contradiction, ignorance, imprecision, etc. **Dancing in the Landscape** Athena Tacha, Harriet Senie, Glenn Harper, 2000.
