Sea Serpent:

Species, Serpents, Spirits, and Skulls Sherrie Lynne Lyons, 2010-07-02 Science permeates nearly every aspect of our lives and yet as current debates over intelligent design the causes of global warming and alternative health practices indicate the question of how to distinguish science from pseudoscience remains a difficult one To address this question Sherrie Lynne Lyons draws on four examples from the nineteenth century sea serpent investigations spiritualism phrenology and Darwin's theory of evolution Each attracted the interest of prominent scientists as well as the general public yet three remained at the edges of scientific respectability while the fourth evolutionary theory although initially regarded as scientific heresy ultimately became the new scientific orthodoxy Taking a serious look at the science behind these examples Lyons argues that distinguishing between science and pseudoscience particularly in the midst of discovery is not as easy as the popular image of science tends to suggest Two examples of present day controversies surrounding evolutionary psychology and the meaning of fossils confirm this assertion She concludes that although the boundaries of what constitutes science are not always clear cut the very intimate relationship between science and society rather than being a hindrance contributes to the richness and diversity of scientific ideas Taken together these entertaining and accessible examples illuminate important issues concerning the theory practice and content of science

The Great New England Sea Serpent J. P. O'Neill, 2003-10-01 Is it a strange mammal related to the seals a descendant of a prehistoric reptile or a new unidentified animal Whatever it is or was the witnesses call it a sea serpent Remarkably similar descriptions of a creature with a long body undulating motion and horse sized snake like head have left a trail of clues and controversy going back three centuries In *The Great New England Sea Serpent* J P O'Neill draws on the historical record as well as previously unpublished first hand accounts to chronicle more than 230 sightings of the mysterious marine creatures inhabiting the Gulf of Maine

The Great Sea-serpent Anthonie Cornelis Oudemans (Jzn), 1892 [The Great Sea Serpent](#) Anthonie Cornelis Oudemans, 2007-08-01

Mysterious and strange are the ocean depths but pioneering cryptozoologist ANTOON CORNELIS OUDEMANS 1858 1943 attempted to bring some order to the realm with this 1892 survey of the reports of monsters of the sea the first of its kind Gathering sightings from around the globe and across the centuries Oudemans eliminates the obvious hoaxes or honest mistakes and then from dozens of legitimate sighting draws conclusions about sea serpent physiology geographic distribution and more This astonishing book still influences thoughts and theories about the great unknowns in the oceans says cryptozoologist Loren Coleman in his new introduction in this edition part of Cosimo's Loren Coleman Presents series

Disentangled R. France, 2023-09-14 The Definitive Study and Solution to the Centuries old Mystery of the World's Most Sighted Sea Serpent There is a long history of conflating sightings

of unidentified marine objects UMOs as purported sea serpents Most sightings are either of an extremely brief duration or made by a single observer and thus often easy to dismiss This is not the case however with respect to the so called Gloucester Sea Serpent which frequented the Massachusetts and New York coasts during the early nineteenth century Witnessed by hundreds of people for extended periods repeatedly over many days the Gloucester UMO is the most sighted sea serpent in history As well due to being the object of study at the time and shortly thereafter by naturalists the mysterious creature remains the most thoroughly investigated of all putative sea serpents For these reasons it has achieved an exalted status among cryptozoologists who maintain it represents the best evidence for the existence of sea serpents For the first time an eminently qualified aquatic biologist and ethnozoologist presents the definitive history of the phenomena and carefully examines the evidence It is concluded that the most parsimonious explanation behind the Gloucester Sea Serpent is as early evidence for what is today recognized as being one of the most serious threats to marine biodiversity entanglement in fishing gear and other maritime debris Therefore although widely considered to be restricted to the advent and widespread use of non degradable plastic in the middle of the twentieth century this new interpretation of the Gloucester UMO suggests that entanglement has a much longer environmental history than is commonly believed Robert L France is a world renowned scientist at Dalhousie University and the author or editor of twenty books and two hundred papers on a wide range of environmental subjects He has undertaken conservation biology research from the High Arctic to the tropics on organisms from bacteria to whales which has been cited many thousands of times in the literature Dr France is a leading authority on many aspects of aquatic zoology including marine ecology and ethnozoology and may be the most qualified person to have recently undertaken research and published peer reviewed articles on the beguiling and befuddling topic of aquatic mystery animals known as cryptids

Encyclopedia of Cryptozoology Michael Newton, 2016-10-05 On every continent and in every nation animals unrecognized by modern science are reported on a daily basis People passionately pursue these creatures the name given to their field of study is cryptozoology Coined in the 1950s the term literally means the science of hidden animals When the International Society of Cryptozoology ISC was formed in 1982 the founders declared that the branch of science is also concerned with the possible existence of known animals in areas where they are not supposed to occur either now or in the past as well as the unknown persistence of presumed extinct animals to the present time or to the recent past what makes an animal of interest to cryptology is that it is unexpected This reference work presents a flesh and blood view of cryptozoology Here 2 744 entries are listed the majority of which each describe one specific creature or type of creature Other entries cover 742 places where unnamed cryptids are said to appear profiles of 77 groups and 112 individuals who have contributed to the field descriptions of objects and events important to the subject and essays on cryptotourism and hoaxes for example Appendices offer a timeline of zoological discoveries annotated lists of movies and television series with cryptozoological themes a list of crypto fiction titles and a list of Internet websites devoted
