*Moral Seascapes* Jonathan Stafford,Henning Trüper,Burkhardt Wolf,2024-11-20 We are no strangers today to visual representations of human suffering at sea the refugee crisis that continues to play out in the seascape between Europe and Africa and not only there yields an ever growing archive of humanitarian tragedy As both a visual backdrop and a lethal medium of unequal mobility maritime space and landscape play a significant role in mediating the ethical demands of this crisis Yet there has been little exploration of the longer history of morality s role in our understanding of aesthetic representations of the sea The diverse contributions in *Moral Seascapes* explore the various symbolic forms through which these shifting moral norms and values have been manifested contributing to debates concerning the place of the sea in visual and literary cultures and the history of morality and emotion as well as the emergence of modern subjectivity Drawing on a range of interdisciplinary perspectives such as visual culture experimental art history literary studies history and philosophy *Moral Seascapes* develops distinctive new insights into the relationship between the moral cultures of modernity and the image of the sea      7th International Symposium on Deep-Sea Corals Santiago Herrera,Juan Armando Sanchez,Luisa

Fernanda Dueñas,2022-05-03      *Seascape Ecology: from characterization to evaluation of state and change over time* Monica Montefalcone,Carlo Nike Bianchi,2023-08-22 Landscape ecology has been a discrete established discipline since at least 1980 Its marine counterpart seascape ecology is barely a decade old its first applications dating from the early 2010s Lack of perception of the marine environment hampers the adoption of many landscape ecology approaches to the sea Seascape ecology relies on special technologies such as remote sensing either acoustic or optical robotics and scuba diving Both disciplines deal with the spatial configuration of ecosystems and consider environmental heterogeneity and dynamics as the main subjects of study and the key for ecosystem functioning and persistence Seascape is here intended as the totality of natural and anthropogenic characters of a marine region To the geologist it is defined by sedimentology and underwater

geomorphology to the biologist by the nature of the living cover of the seafloor to the ecologist by the relationships among functional processes and the spatial organization of ecosystems The goal of this research topic is to encourage original research case studies reviews and viewpoints to identify research priority gaps and possibly contribute to filling them in We will appreciate in particular manuscripts dealing with recent advances such as high resolution habitat mapping underwater soundscape and biophony development application and validation of biotic indices to assess seafloor integrity as requested for instance by recent European Directives Papers of interest may discuss the multivarious facets of stability and describe resistance and resilience patterns the role of stress and disturbance regime shift and phase shift or may take up the challenge of integrating coastal landscape and seascape analyses Studies of long term series are welcome as well as methodological improvements and macroecological approaches on the importance of species diversity and connectivity in seascape organization
