This book examines family interactions and relationships during the transition to parenthood. It offers a unique integration of different lines of research on prenatal family dynamics contributed by leading family researchers in North America and Europe who use observational approaches to study emergent family processes. The book explores prenatal dynamics in diverse families including adolescent couples, same sex couples, couples experiencing infertility, and couples expecting their second child. The introduction, anchored in family systems and structural theories, provides an overview of challenges couples commonly experience during the transition to parenthood and details prenatal family processes that predict postpartum adjustment in families. This sets the stage for subsequent chapters by emphasizing unparalleled windows into prenatal family dynamics provided by direct observation. Initial chapters focus on predictors of prenatal interactions and partners' representations of parenthood. Subsequent chapters describe original research on prebirth couple interactions and the coparenting relationship emerging during pregnancy. The volume includes several studies that rely on innovative research designs using observations of simulated couple encounters with their newborn represented by a life-sized infant doll. The book concludes with a review of recent prenatal intervention programs designed to improve interpersonal and coparenting relationships of married and unmarried couples. The volume offers recommendations for future research on prenatal family dynamics, including suggestions for methodological advances, exploration of prenatal risk factors, expansion of conceptual models to incorporate culturally meaningful coparents besides mothers and fathers, and further focus on prenatal intervention programs. This book is an essential resource for researchers, clinicians, and professionals and graduate students in the fields of infant mental health, early child development, family studies, pediatrics, developmental psychology, public health, social work, and early childhood education.

Brothers and Sisters Ann Buchanan, Anna Rotkirch, 2020-12-09. This edited volume presents unique insights on sibling relationships in adulthood in the early 21st century, focusing on three themes: relations beyond childhood and school years, factors shaping social support provision between siblings, and changes in family life and how these impact sibling relations. Comprised of chapters from distinguished international family scholars, this book examines sibling dynamics across age, race, culture, gender, sexual orientation, geography, and social environments. It answers important questions such as: to what extent do siblings support each other at different stages of the life cycle? How do cultural practices and family obligations impact on sibling support? How does sibling support differ when looking at surrogates, migrant families, polygamous families, and siblings with disabilities? These contributions expand and contribute greatly to the field of sibling studies and will be of interest to all students and scholars studying and researching family relationships.
