Long Run Economic Relationships Readings In Cointegration:

The Principles of Practical Cost-benefit Analysis Robert Sugden, 1978 *Long-run economic relationships* Clive William John Granger, 1991 *Time-Series-Based Econometrics* Michio Hatanaka, 1996-01-25

In the last decade time series econometrics has made extraordinary developments on unit roots and cointegration. However, this progress has taken divergent directions and has been subjected to criticism from outside the field. In this book, Professor Hatanaka surveys the field, examines those portions that are useful for macroeconomics, and responds to the criticism. His survey of the literature covers not only econometric methods but also the application of these methods to macroeconomic studies. The most vigorous criticism has been that unit roots do not exist in macroeconomic variables and thus that cointegration analysis is irrelevant to macroeconomics. The judgement of this book is that unit roots are present in macroeconomic variables when we consider periods of 20 to 40 years but that the critics may be right when periods of 100 years are considered. Fortunately, most of the time series data used for macroeconomic studies cover fall within the shorter time span. Among the numerous methods for unit roots and cointegration, those useful from macroeconomic studies are examined and explained in detail without overburdening the reader with unnecessary mathematics. Other less applicable methods are discussed briefly and their weaknesses are exposed. Hatanaka has rigorously based his judgements about usefulness on whether the inference is appropriate for the length of the data sets available and also on whether a proper inference can be made on the sort of propositions that macroeconomists wish to test. This book highlights the relations between cointegration and economic theories and presents cointegrated regression as a revolution in econometric methods. Its analysis is of relevance to academic and professional or applied econometricians. Step by step explanations of concepts and techniques make the book a self-contained text for graduate students.

Econometrics Badi H. Baltagi, 2007-11-21

Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics. Not only does it teach some of the basic econometric methods and the underlying assumptions behind them but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis. This book's strength lies in its ability to present complex material in a simple yet rigorous manner. This superb fourth edition updates identification and estimation methods in the simultaneous equation model. It also reviews the problem of weak instrumental variables as well as updating panel data methods.

information and point to further readings *Econometric Business Cycle Research* Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i.e. ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable *The 9th Annual Conference of the Economic Forum of Entrepreneurship & International Business* Ghada Gomaa A. Interest Rates and Budget

Deficits Kanhaya L. Gupta, Bakhtiar Moazzami, 2005-10-11 There is widespread belief that the high interest rates of the 1980s and 1990s in the developed world have been caused by high budget deficits Yet there is no conclusive evidence to support such a belief This book systematically examines this and other questions relating to the behaviour of real interest rates in eleven developed countries The results show that generalizations across the countries can be hazardous and strongly suggests that factors specific to individual countries are still of vital importance [Forecasting Financial Markets in India](#)
