Infancy to Early Childhood Robert N. Emde, John K. Hewitt, 2001-04-19 Behavioral genetics is a fast growing multidisciplinary field which attempts to explain the influence of genetic and environmental factors on behavior through the lifespan The preferred investigative technique for teasing out the differences between genetics and the environment is the longitudinal twin study This book is the first complete publication from the MacArthur Longitudinal Twin Study MALTS that is by far the most ambitious and comprehensive longitudinal twin study to date The goal of such an in depth study was not to merely provide thorough descriptions of developmental change between the ages of one and three years but to offer an original theoretical framework that explains how change occurs in different domains and how genetics and the environment influence those changes This rigorous study will set the agenda for developmental psychology and behavioral genetics for decades to come

Engle, 2005 it is extremely useful and contemporary covering among its five hundred pages genetics neuro imaging and emotional intelligence It also provides a good indicator of current psychological work in the area with empirical evidence and theory sitting alongside each other The material on meta cognition would I suspect be of most interest to philosophers along with the more basic questions concerning the nature of memory and intelligence

Memory in Infancy and Childhood Mary L. Courage, Nelson Cowan, 2008-09-08 Human memory is not only the repository of our past but the essence of who we are As such it is of enduring fascination We marvel at its resilience in some situations and its fragility in others The origin of this extraordinary cognitive capacity in infancy and childhood is the focus of vigorous research and debate as we seek to understand the record of our earliest beginnings The first edition of this volume The Development of Memory in Childhood documented the state of the art science of memory development a decade ago This new edition The Development of Memory in Infancy and Childhood provides a thorough update and expansion of the previous text and offers reviews of new research on significant themes and ideas that have emerged since then Topics include basic memory processes in infants and toddlers the cognitive neuroscience of memory development the cognitive and social factors that underlie our memory for implicit and explicit events autobiographical memory and infantile amnesia working memory the role of strategies and knowledge in driving memory development and the impact of stress and emotion on these basic processes The book also includes applications of basic memory processes to a variety of real world settings from the courtroom to the classroom Including contributions from many of the best researchers in the field this classic yet contemporary volume will appeal to senior undergraduate and graduate students of developmental and cognitive psychology as well as to developmental psychologists who want a compendium of current reviews on key topics in memory development

Three Seductive Ideas Jerome Kagan, 2000-04-07 Do the first two years of life really determine a child's future development Are human beings like other primates only motivated by pleasure And do people actually have stable traits like intelligence fear anxiety and temperament This book the product of a lifetime of research by one of the founders of developmental psychology takes on the powerful assumptions behind these questions and proves them mistaken Ranging with impressive ease from cultural history to philosophy to psychological research literature Jerome Kagan weaves an argument that will rock the social sciences and the foundations of public policy Scientists as well as lay people tend to think of abstract processes like intelligence or fear as measurable entities of which someone might have more or less This approach in Kagan's analysis shows a blindness to the power of context and to the great variability within any individual subject to different emotions and circumstances Infant determinism is another widespread and dearly held conviction that Kagan contests This theory with its claim that early relationships determine lifelong patterns underestimates human resiliency and adaptiveness both emotional and cognitive and of course fails to account for the happy products of miserable childhoods and vice versa The last of Kagan's targets is the vastly overrated pleasure principle which he argues can hardly make sense of unselfish behavior impelled by the desire for virtue and self respect the wish to do the right thing Written in a lively style that uses fables and fairy tales history and science to make philosophical points this book challenges some of our

most cherished notions about human nature **Revealing the Inner Worlds of Young Children** Robert N. Emde, Dennis P. Wolf, David Oppenheim, 2003-09-25 This book reports the work of a 20 year collaboration between a multidisciplinary group of clinicians and developmental scientists who have created and investigated a new tool to elicit and analyze children's narratives This tool is the MacArthur Story Stem Battery a systematic collection of story beginnings that are referred to as stems These stems are designed to elicit information from children about their representational worlds This method is particularly exciting because using it allows developmental psychologists and others to gain information directly from children about their emotional states and what they are able to understand and in turn to use this information to explore significant emotional differences among children This work will appeal to researchers and practitioners in developmental and clinical psychology *Genetics, Ethics and Education* Susan Bouregy, Elena L. Grigorenko, Stephen R. Latham, Mei Tan, 2017-10-05 A thorough cross disciplinary exploration of the implications of genomics influenced educational practice for consideration by scientists practitioners and laypersons alike **Intelligence, Heredity and Environment** Robert J. Sternberg, Elena L. Grigorenko, 1997-01-28 The debate over nature versus nurture in relation to intelligence is not as clearly drawn as it was ten years ago when geneticists claimed that intelligence is innate while environmentalists claimed that culture is the major determining factor Although the debate has not been resolved it has been significantly refined Robert Sternberg and Elena Grigorenko address the roles and interaction of nature and nurture in Intelligence Heredity and Environment This book provides a comprehensive balanced current survey of theory and research on the origins and transmission of human intelligence The book is unique in the diversity of viewpoints it presents and its inclusion of the very most recent theories and findings It highlights the search for genes associated with specific cognitive abilities interactionist theories cultural relativism educational strategies developmental perspectives and fallacies of previous intelligence research
