**Practising Existential Psychotherapy** Ernesto Spinelli, 2007-08-01 Existential psychotherapy has emerged as an approach that is distinctively different to that of the other models and systems within psychotherapy It provides a set of significant challenges to and critiques of contemporary Western psychotherapy both at the level of theory and of practice Although a substantial amount of writing that seeks to describe and delineate the theoretical underpinnings of existential psychotherapy already exists this is not the case with texts dealing with the application of theory in the form of practice Practising Existential Psychotherapy examines the unique qualities and possibilities of an existential approach to

psychotherapy Drawn from Ernesto Spinelli's own experience as an internationally recognised theorist lecturer and practitioner the book's overall aim is to provide a thorough and accessible explication of existential psychotherapy in practice Beginning with an overview of the theoretical underpinnings and distinguishing features of existential psychotherapy the text describes and develops a three phase structural model for its practice As well as describing the key components of each phase the text provides descriptive examples and topic focused exercises designed to assist readers in developing their own practice based understanding of existential psychotherapy Ernesto Spinelli is a Professor in the School of Psychotherapy and Counselling at Regent's College London

*Thought and Feeling* Richard E. Nisbett, 2017-07-05 Recently there has been growing awareness and acceptance of the proposition that people do not exist in a world of physically defined forces and events but in a world defined by their own perceptions cognitions conclusions and imaginations We respond and react not to some objectively defined set of stimuli but to our own apperceptions of stimuli that we define subjectively The original essays in this volume center on one aspect of this process of attribution The extent to which the perception of events and causes results in the determination modification or alteration of emotions feelings and affective states This book is divided into five sections each of which elucidates and extends these theoretical conceptions Part 1 provides a historical background and analytical framework for the rest of the book Part 2 presents chapters dealing with the sorts of internal cues which may give rise to a feeling state Part 3 presents a chapter discussing the evaluative needs aroused by the internal cues Part 4 is concerned with the process of explanation triggered by the evaluative needs Part 5 deals with various external cues

and how they are used to label the internal feeling state There is a concluding discussion of the cognitive alteration of feeling states The authors deal with aggression boredom obesity the control of pain and delusional systems This volume is of continuing importance to clinical and experimental psychologists as well as social psychologists Each of the authors takes the theoretical concept of cognition and relates it to research in biofeedback physiology social psychology altered states of consciousness etc Thus the book bridges the gap between cognitive theory and the use of that theory in applied research
