Magic and the Will to Science Agnes Horvath, 2024-03-19 This book offers a political anthropological perspective on the problematic character of science combining insights from historical sociology political theory and cultural anthropology Its central idea departing from the works of Frances Yates and the Gnosticism thesis of Eric Voegelin is that far from being the radical opposite of magic modern science effectively grew out of magic and its varieties like alchemy Hermetic philosophy the occult Gnosticism and Neoplatonism Showing that the desire to use science to solve various real or presumed problems of human existence has created a permanent liminal crisis it contends that the will to science is parasitic existing as it does in sheer relationality outside of and in between concrete places and communities A study of the mutual relationship between magic and science in different historical eras ranging from the Early Neolithic to recent disease prevention ideas **Magic and the Will to Science** will appeal to scholars and students of social and anthropological theory and the philosophy and sociology of science **Magic, Science and Society** Alex Dennis, 2024-06-14 Magic Science and Society investigates the way the rationality debate has developed over the last century from E E Evans Pritchard's study of Azande magic through Peter Winch's argument that there can be no such thing as a social science across the arguments about the proper status of science in the 1970s and 1980s to the epistemological and ontological turns of the early twenty first century Different people have different understandings of what is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social

sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners

Magic's Translations Margaret J. Wiener, 2025-04-04 Do you believe in magic This familiar question suggests magic is easily recognized but unreal In *Magic's Translations* Margaret J Wiener argues that such views are shaped by historical power struggles especially in Europe's relations with the wider world Focusing on nineteenth and twentieth century Dutch interactions with Indonesians Wiener reveals how colonial agents framed unfamiliar practices practitioners and objects as magic rendering distinct phenomena fundamentally alike and advancing colonizing projects that deemed magic antithetical to reason and reality While colonial authorities including ethnologists mobilized the concept of magic to differentiate Europeans from Indonesians nature from culture reason from superstition and fact from fetish their efforts produced unexpected outcomes Some Indonesian artifacts and acts not only retained their power but invaded European experiences As anthropologists were among the key translators of magic throughout the world Wiener intersperses accounts of magic's translations in the Indies with reflections on anthropology's ongoing engagement with the concept She demonstrates that magic became an object of expert knowledge political control and popular fascination rather than a self-evident category or relic of naïve belief

Science, Technology and Magic in The Witcher Kristine Larsen, 2023-02-13 As Andrzej Sapkowski was fleshing out his character Geralt of Rivia for a writing contest he did not set out to write a science textbook or even a work of science fiction However the world that Sapkowski created in his series *The Witcher* resulted in a valuable reflection of real world developments in science and technology As the *Witcher* books have been published across decades the sorcery in the series acts as an extension of the modern science it grows alongside This book explores the fascinating entanglement of science and magic that lies at the heart of Sapkowski's novel series and its widely popular video game and television adaptations This is the first English language book length treatment of magic and science in the *Witcher* universe These are examined through the lenses of politics religion history and mythology Sapkowski's richly detailed universe investigates the sociology of science and ponders some of the most pressing modern technological issues such as genetic engineering climate change weapons of mass destruction sexism speciesism and environmentalism Chapters explore the unsettling realization that the greatest monsters are frequently human and their heinous acts often involve the unwitting hand of science

Knowing the Unknown: Through Science and Sufism Dr. Ghayur Ayub, 2016-06-09 *Knowing the Unknown Through Science and Sufism* touches on the creation of the universe starting from the Big Bang and following through the phases of evolution until the present day discussing the appearance of life on earth after billions of years of turmoil It looks at the early beginnings of religion in prehistoric societies and how this progressed into organized religion as we know it today This book explores the similarities between the scientific concepts related to evolutionary change and the concepts that Sufis have highlighted with reference to verses of the Quran It discusses the history of mankind and the journey through theological philosophical and spiritual phases The book attempts to expand on the concept of time in relation

to evolution and the difficulty in defining time and why the Quran mentions different times in different verses and also on an understanding of time in the present day The subject matter is vast but this book has attempted to address it in a more easily accessible way **The Science of Magic 6-Pack** James Anderson,2016-08-01 Be astounded with some of these amazing apparitions ethereal suspensions daring physical feats intriguing illusions legendary levitations and other ways magicians use science and technology to fool our senses Featuring TIME content this high interest book builds critical literacy skills and academic vocabulary and is purposefully leveled to engage different types of learners Developed by Timothy Rasinski and Lori Oczkus the text includes a table of contents captions glossary index and images to deepen understanding The detailed sidebars feature fun facts that develop higher order thinking The Try It culminating activity provides additional language development activities Aligned with McREL and WIDA TESOL standards this text features complex content appropriate for middle school students This 6 Pack includes six copies of this title and a lesson plan **The Anthropology of Magic** Susan Greenwood,2020-05-28 Magic is arguably the least understood subject in anthropology today Exotic and fascinating it offers us a glimpse into another world but it also threatens to undermine the foundations of anthropology due to its supposed irrational and non scientific nature Magic has thus often been explained away by social or psychological reduction The Anthropology of Magic redresses the balance and brings magic as an aspect of consciousness into focus through the use of classic texts and cutting edge research Suitable for student and scholar alike The Anthropology of Magic updates a classical anthropological debate concerning the nature of human experience A key theme is that human beings everywhere have the potential for magical consciousness Taking a new approach to some perennial topics in anthropology such as shamanism mythology witchcraft and healing the book raises crucial theoretical and methodological issues to provide the reader with an engaging and critical understanding of the dynamics of magic Join the live discussion on Facebook **Exploring Journal Writing Through Science Research Projects** Alexis Burling,2018-12-15 Throughout history scientists such as Marie Curie and Isaac Newton recorded their hypotheses and predictions kept track of data during experiments and protected precious samples from the field in journals This instructive volume covers the four main areas of science Physical Science Life Science Earth and Space Science and Engineering Design Students will learn how to create their own science journals They can choose from a variety of hands on experiments such as creating a model of the new ninth planet to designing a water filtration system in order to broaden and deepen their learning experience and share newfound knowledge with their peers **Science** ,1923 Vols for 1911 13 contain the Proceedings of the Helminothological Society of Washington ISSN 0018 0120 1st 15th meeting **Saving the World Through Science Fiction** Michael R. Page,2017-02-28 One of the major figures in science fiction for more than sixty years James Gunn has been instrumental in making the genre one of the most vibrant and engaging areas of literary scholarship His genre history Alternate Worlds and his The Road to Science Fiction anthologies introduced countless readers to science fiction He founded the Gunn Center for the Study of Science Fiction in 1982 But

Gunn has also been one of the genre's leading writers. His classic novels *Star Bridge* with Jack Williamson, *The Joy Makers*, *The Immortals*, and *The Listeners* helped shape the field. Now in his nineties, he remains a prominent voice. His forthcoming novel is *Transformation*. Drawing on materials from Gunn's archives and personal interviews with him, this study is the first to examine the life, career, and writing of this science fiction grandmaster.

Magic: A History Chris Gosden, 2020-11-10. An Oxford professor of archaeology explores the unique history of magic, the oldest and most neglected strand of human behavior and its resurgence today. Three great strands of belief run through human history: Religion is the relationship with one god or many gods; masters of our lives and destinies; Science distances us from the world, turning us into observers and collectors of knowledge; And magic is direct human participation in the universe, where we have influence on the world around us, and the world has influence on us. Over the last few centuries, magic has developed a bad reputation thanks to the unsavory tactics of shady practitioners and to a successful propaganda campaign on the part of religion and science which denigrated magic as backward, irrational, and primitive. In *Magic*, however, the Oxford professor of archaeology, Chris Gosden, restores magic to its essential place in the history of the world, revealing it to be an enduring element of human behavior that plays an important role for individuals and cultures. From the curses and charms of ancient Greek, Roman, and Jewish magic to the shamanistic traditions of Eurasia, indigenous America, and Africa, from the alchemy of the Renaissance to the condemnation of magic in the colonial period and the mysteries of modern quantum physics, Gosden's startling, fun, and colorful history supplies a missing chapter of the story of our civilization. Drawing on decades of research around the world, touching on the first known horoscope, a statue ordered into exile, and the mystical power of tattoos, Gosden shows what magic can offer us today and how we might use it to rethink our relationship with the world. *Magic* is an original, singular, and sweeping work of scholarship, and its revelations will leave a spell on the reader.

Magical Consciousness Susan Greenwood, Erik D. Goodwyn, 2015-08-20. How does a mind think magically? The research documented in this book is one answer that allows the disciplines of anthropology and neurobiology to come together to reveal a largely hidden dynamic of magic. Magic gets to the very heart of some theoretical and methodological difficulties encountered in the social and natural sciences, especially to do with issues of rationality. This book examines magic head-on, not through its instrumental aspects but as an orientation of consciousness. Magical consciousness is affective, associative, and synchronistic, shaped through individual experience within a particular environment. This work focuses on an in-depth case study using the anthropologist's own experience gained through years of anthropological fieldwork with British practitioners of magic. As an ethnographic view, it is an intimate study of the way in which the cognitive architecture of a mind engages the emotions and imagination in a pattern of meanings related to childhood experiences, spiritual communications, and the environment. Although the detail of the involvement in magical consciousness presented here is necessarily specific, the central tenets of *modus operandi* are common to magical thought in general and can be applied to cross-cultural analyses to increase understanding of this ubiquitous human
