Kabbalah, Magic, and Science David B. Ruderman, 1988 In describing the career of Abraham Yagel a Jewish physician kabbalist and naturalist who lived in northern Italy from 1553 to about 1623 David Ruderman observes the remarkable interplay between early modern scientific thought and religious and occult traditions from a wholly new perspective that of Jewish intellectual life Whether he was writing about astronomical discoveries demons marvelous creatures and prodigies of nature the uses of magic or reincarnation Yagel made a consistent effort to integrate empirical study of nature with kabbalistic and rabbinic learning Yagel s several interests were united in his belief in the interconnectedness of all thing a belief shared by many Renaissance thinkers that turns natural phenomena into signatures of the divine unity of all things Ruderman argues that Yagel and his coreligionists were predisposed to this prevalent view because of occult strains in

traditional Jewish thought He also suggests that underlying Yagel s passion for integrating and correlating all knowledge was a powerful psychological need to gain cultural respect and acceptance for himself and for his entire community especially in a period of increased anti Semitic agitation in Italy Yagel proposed a bold new agenda for Jewish culture that underscored the religious value of the study of nature reformulated kabbalist traditions in the language of scientific discourse so as to promote them as the highest form of human knowledge and advocated the legitimate role of the magical arts as the ultimate expression of human creativity in Judaism This portrait of Yagel and his intellectual world will well serve all students of late Renaissance and early modern Europe **The Magic of Science for Young Children** Esther Gordon-Nourok,1975

Magic and the Mind Eugene Subbotsky, 2010-03-31 Magical thinking and behavior have traditionally been viewed as immature misleading alternatives to scientific thought that in children inevitably diminish with age In adults these inclinations have been labeled by psychologists largely as superstitions that feed on frustration uncertainty and the unpredictable nature of certain human activities In *Magic and the Mind* Eugene Subbotsky provides an overview of the mechanisms and development of magical thinking and beliefs throughout the life span while arguing that the role of this type of thought in human development should be reconsidered Rather than an impediment to scientific reasoning or a byproduct of cognitive development in children magical thinking is an important and necessary complement to these processes enhancing creativity at problem solving and reinforcing coping strategies among other benefits In adults magical thinking and beliefs perform important functions both for individuals coping with unsolvable problems and stressful situations and for society enabling mass influence and promoting social harmony Operating in realms not bound by physical causality such as emotion relationships and suggestion magical thinking is an ongoing developing psychological mechanism that Subbotsky argues is integral in the contexts of politics commercial advertising and psychotherapy and undergirds our construction and understanding of meaning in both mental and physical worlds *Magic and the Mind* represents a unique contribution to our understanding of the importance of magical thinking offering experimental evidence and conclusions never before collected in one source It will be of interest to students and scholars of developmental psychology as well as sociologists anthropologists and educators

The Psychology of Magic and the Magic of Psychology Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians

have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception

Science, Technology and Magic in The Witcher Kristine Larsen, 2023-02-13 As Andrzej Sapkowski was fleshing out his character Geralt of Rivia for a writing contest he did not set out to write a science textbook or even a work of science fiction However the world that Sapkowski created in his series The Witcher resulted in a valuable reflection of real world developments in science and technology As the Witcher books have been published across decades the sorcery in the series acts as an extension of the modern science it grows alongside This book explores the fascinating entanglement of science and magic that lies at the heart of Sapkowski's novel series and its widely popular video game and television adaptations This is the first English language book length treatment of magic and science in the Witcher universe These are examined through the lenses of politics religion history and mythology Sapkowski's richly detailed universe investigates the sociology of science and ponders some of the most pressing modern technological issues such as genetic engineering climate change weapons of mass

destruction sexism speciesism and environmentalism Chapters explore the unsettling realization that the greatest monsters are frequently human and their heinous acts often involve the unwitting hand of science **Magic, Science, and Religion in Early Modern Europe** Mark A. Waddell, 2021-01-28 From the recovery of ancient ritual magic at the height of the Renaissance to the ignominious demise of alchemy at the dawn of the Enlightenment Mark A Waddell explores the rich and complex ways that premodern people made sense of their world He describes a time when witches flew through the dark of night to feast on the flesh of unbaptized infants magicians conversed with angels or struck pacts with demons and astrologers cast the horoscopes of royalty Ground breaking discoveries changed the way that people understood the universe while in laboratories and coffee houses philosophers discussed how to reconcile the scientific method with the veneration of God This engaging illustrated new study introduces readers to the vibrant history behind the emergence of the modern world
