**Magnetic Fields of Stars** Илья Николаевич Гнедин, Yu N. Gnedin, T. M. Natsvlishvili, 2000 Fundamental Stellar Properties: The Interaction Between Observation and Theory Timothy R. Bedding, Andrew J. Booth, John M. Davis, 2013-12-01 This Symposium began with a proposal for a meeting to honour Emeritus Professor Robert Hanbury Brown on the occasion of his 80th birthday He requested that any such meeting should be on a topic that would be of benefit to the Sydney University Stellar Interferometer SUSI program With SUSI and several other high angular resolution instruments either in operation or coming on line within the next decade and with advances in astrometry spectroscopy and in theoretical models of stellar atmospheres and interiors it appeared to be both appropriate and timely to hold a symposium on Fundamental Stellar Properties the Interaction between Observation and Theory The emphasis of the meeting was on the critical assessment of the quality accuracy and prospects for improvement of the observational data and theoretical models on the outstanding problems in stellar astrophysics and on the feasibility of achieving the observational and theoretical advances required for their solution Invited papers comprised the major part of the oral program and the speakers responded to the challenge issued by the Scientific Organising Committee to critically review the current status and prospects for their area of expertise The Symposium was opened by the Chancellor of the University of Sydney Emeritus Professor Dame Leonie Kramer who welcomed the 126 participants from 22 countries on behalf of the University The oral program included 52 invited reviews and papers and 10 contributed papers *The Role of Magnetic Fields in the Formation of Stars* Derek Ward-Thompson, Ray S. **Nuclear Science Abstracts**, 1976 **Scientific and Technical Aerospace Reports**, 1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database *Sunspots: Theory and Observations* J.H. Thomas, N.O. Weiss, 2012-12-06 This volume contains the invited papers presented at the NATO Advanced Research Workshop on the Theory of Sunspots held in Cambridge England 22-27 September 1991 The idea of holding this Workshop first arose during the Solar Optical Telescope work shop on Theoretical Problems in High Resolution Solar Physics in Munich in 1985 At that meeting separate discussion groups were formed to consider specific topics in solar physics The discussion group on sunspots recommended that there be a meeting devoted to theoretical problems associated with sunspots the motivation being the consensus that theory seemed to lag behind the observational evidence in our quest for a satisfactory understanding of the physics of sunspots This recommendation was warmly received and the two of us were designated to organize the Workshop Although the Workshop eventually took place later than originally envisioned the delay turned out to

be fortunate and the timing of the Workshop was ideal for a number of reasons There have been remarkable improvements in high resolution observations of sunspots in the past few years and many important new observational results were presented for the first time at this Workshop by groups working at the Lockheed Palo Alto Research Laboratories the Swedish and German telescopes in the Canary Islands and the V S National Solar Observatory Vector magnetographs and Stokes polarimetry have at last given us reliable measurements of the vector magnetic fields in sunspots

**Protostars and Planets V** Bo Reipurth, David Jewitt, Klaus Keil, 2007 Protostars and Planets V builds on the latest results from recent advances in ground and space based astronomy and in numerical computing techniques to offer the most detailed and up to date picture of star and planet formation including the formation and early evolution of our own solar system

Rodono,2013-11-11 IAU Colloquium No 71 had its immediate origins in a small gathering of people interested in the optical and UV study of flare stars which took place during the 1979 Montreal General Assembly We recognized that a fundamental change was taking place in the study of these objects Space borne instruments especially IUE and Einstein and a new generation of ground based equipment were having a profound effect on the range of investigations it was possible to make To extract maximum benefit from these new possibilities it would be necessary as never before to have good communication with colleagues in other disciplines for instance with atomic and solar physicists Similarly studies of phenomena associated with the outer atmospheres of the late type stars could now hope to give significant insights into certain aspects of solar activity So in view of the wide range of backgrounds of those participating the meeting had an unusually high proportion of invited reviews while most of the contributed papers were presented as posters It is gratifying that in the short time since the meeting a good deal of correspondence has been received from participants remarking on the success of this format Once the decision had been taken in principle to hold the meeting a very considerable amount of work fell on the two organizing committees viz the Scientific and Local Organizing Committees The Scientific Organizing Committee was chaired by D J Mullan and consisted of A D      **Literature 1985, Part 2** S.
