Magnetic Resonance Imaging and Spectroscopy in Sports Medicine Michel Osteaux, Kenny de Meirleir, Maryam Shahabpour, 2012-12-06 Throughout the twentieth century interest in sport has evidenced a major increase worldwide and a new field of sports medicine has emerged Sport spectators hip has been stimulated in part by the increased ease of international travel and the introduction of new means of communication Interest in professional sports and in such events as the World Cup and the Olympic Games has never been higher and the general popularity of sports has drawn increasingly greater numbers of young people to sports participation Interest in sports participation has been strengthened both by the provision of numerous sports facilities to populations throughout the world and the accumulating information base that relates regular participation in programs of sport and exercise to health enhancement Along with increases in interest and participation has come a need for a better understanding of the physiological changes accompanying muscular activity and of the trauma that can result from both competitive sport and recreational exercise **Magnetic Resonance Imaging and Spectroscopy in Sports Medicine** Michel Osteaux, Kenny de Meirleir, Maryam Shahabpour, 2011-12-21 Throughout the twentieth century interest in sport has evidenced a major increase worldwide and a new field of sports medicine has emerged Sport spectators hip has been stimulated in part by the increased ease of international travel and the introduction of new means of communication Interest in professional sports and in such events as the World Cup and the Olympic Games has never been higher and the general popularity of sports has drawn increasingly greater numbers of young people to sports participation Interest in sports participation has been strengthened both by the provision of numerous sports facilities to populations throughout the world and the accumulating information base that relates regular participation in programs of sport and exercise to health enhancement Along with increases in interest and participation has come a need for a better understanding of the physiological changes accompanying muscular activity and of the trauma that can result from both competitive sport and recreational exercise **Methods in Biomedical Magnetic Resonance Imaging and Spectroscopy** Ian Robert Young, 2000 These volumes are an abstraction from the Encyclopedia of Nuclear Magnetic Resonance of articles concerned with magnetic resonance imaging and spectroscopy The volumes cover imaging in all its forms and spectroscopy in as far as it relates to in vivo studies and clinical applications involving in vitro investigations of tissue The various articles which comprise these two volumes are organised into topic based sections Some of the articles appear as they were originally presented in the Encyclopedia where there is little new information and some have been more or less substantially revised in the light of what has happened since the articles were first written A number of new articles have been added where topics have either developed from fragmentary discussions in the early 1990s or have been created ab initio since the publication of the Encyclopedia These extensive volumes are unique in their coverage with a balance between imaging physics spectroscopy and clinical studies In many ways they reflect the scope covered by the major

international in vivo NMR Societies with a conscious effort to allow the reader to understand all the elements that make up modern clinical magnetic resonance Equally the topic is so huge and still evolving so fast in detail rather than concept that they can act as no more than an introduction though at quite a demanding level The reader will appreciate the extent nature and dynamics of human and animal magnetic resonance and will have the route map to allow them to find any further information they may need **Conservative Management of Sports Injuries** Thomas E.
