Flora of the Pacific Northwest C. Leo Hitchcock, Arthur Cronquist, 2018-10-02 *Flora of the Pacific Northwest* first published in 1973 became an instant classic for its innovative style of providing species descriptions in the identification keys and for its comprehensive illustrations of nearly all treated taxa species subspecies and varieties Students rely on it as an essential primer while veteran botanists and natural resource managers use it as the definitive reference for the region's flora This completely revised and updated edition captures the advances in vascular plant systematics over the decades since publication of the first edition These advances together with significant changes in plant nomenclature the description of taxa new to science from the region and the recent documentation of new native and nonnative species in the Pacific Northwest required a thorough revision of this authoritative work *Flora of the Pacific Northwest* covers all of Washington the northern half of Oregon Idaho north of the Snake River Plain the mountainous portion of western Montana and the southern portion of British Columbia It accounts for the wild growing native and introduced vascular plants falling within those boundaries and includes Treatment of 5 545 taxa more than 1 000 taxa added from the first edition Illustrations for 4 716 taxa 1 382 more than the first edition Nomenclature changes for more than 40 percent of the taxa included in the first edition These enhancements make this new edition the most comprehensive reference on Pacific Northwest vascular plants for professional and amateur botanists ecologists rare plant biologists plant taxonomy instructors land managers nursery professionals and gardeners

Pittonia Edward Lee Greene, 1889 A series of papers relating to botany and botanists by Edward L. Greene *Manual of Grasses for North America* Mary E. Barkworth, Laurel K. Anderton, Kathleen M. Capels, Sandy Long, Michael B. Piep, 2007-09-30 Grasses are the world's most important plants They are the dominant species over large parts of the earth's land surface a fact that is reflected in the many different words that exist for grasslands words such as prairie veldt palouse and pampas to mention just a few As a group grasses are of major ecological importance as soil binders and providers of shelter and food for wild animals both large and small Some grasses such as wheat rice corn barley rye tef and sugar cane are major sources of calories for humans and their livestock others primarily bamboos are used for construction tools paper and fabric More recently the seed catalogs that tantalize gardeners each winter have borne witness to an increasing appreciation of the aesthetic value of grasses The *Manual of Grasses for North America* is designed as a successor to the classic volume by Hitchcock and Chase It reflects current taxonomic thought and includes keys illustrations and distribution maps for the nearly 900 native and 400 introduced species that have been found in North America north of Mexico In addition it presents keys and illustrations for several species that are known only in cultivation or are of major agricultural significance either as progenitors of bread wheat and corn or as a major threat to North American agriculture because of their ability to hybridize with crop species The *Manual* is a major reference work for grasses that will retain its value for many years

Grasses of the Intermountain Region Laurel K. Anderton, Mary E. Barkworth, 2009-11-23

Grasses of the Intermountain Region is a modification of the two grass volumes of the Flora of North America FNA It is designed for identifying members of the Poaceae in the region between the Sierra Nevada and Rocky Mountains and is intended for use by botanists working with the grasses in this intermountain region of North America The reduction in number of taxa included from FNA has reduced the length of the keys and made it possible to include in a single volume descriptions and illustrations for all taxa treated as well as provide distribution maps for species that are established in the area Another difference from the FNA volumes is that the maps in this volume show only records from IMR and adjacent areas rather than the full North America range of the taxa
