Handbook of Total Quality Management Christian N. Madu, 2012-12-06 Quality issues are occupying an increasingly prominent position in today's global business market with firms seeking to compete on an international level on both price and quality Consumers are demanding higher quality standards from manufacturers and service providers while virtually all industrialized nations have instituted quality programs to help indigenous corporations A proliferation in nation wide and regional quality awards such as the Baldrige award and certification to ISO 9000 series are making corporations world wide quality conscious and eager to implement programs of continuous improvement To achieve competitiveness quality practice is a necessity and this book offers an exposition of how quality can be attained The Handbook of Total Quality Management Explores in separate chapters new topics such as re engineering concurrent engineering ISO standards QFD the Internet the environment advanced manufacturing technology and benchmarking Discusses the views of leading quality practitioners such as Deming Juran Ishikawa Crosby and Taguchi throughout the book Considers important strategies for quality improvement including initiation and performance evaluation through auditing re engineering and process and design innovations With contributions from 47 authors in 13 different countries the Handbook of Total Quality Management is invaluable as a reference guide for anyone involved with quality management and deployment including consultants practitioners and engineers in the professional sector and students and lecturers of information systems management and industrial engineering

Advanced Techniques for Maintenance Modeling and Reliability Analysis of Repairable Systems Garima Sharma, Rajiv Nandan Rai, 2023-09-27 ADVANCED TECHNIQUES FOR MAINTENANCE MODELING AND RELIABILITY ANALYSIS OF REPAIRABLE SYSTEMS This book covers advanced models and methodologies for reliability analysis of large complex and critical repairable systems that undergo imperfect maintenance actions in industries having MRO facilities and also covers real life examples from the field of aviation The content presented in this book is inspired by the existing limitations of the generalized renewal process GRP model and the problems confronted by the maintenance repair and operations MRO facilities in industries dealing with large and complex repairable systems Through this book the authors have attempted to equip the MRO facilities with more advanced scientific tools and techniques by addressing various limitations related to the reliability analysis of repairable systems The book is dedicated to various imperfect maintenance based virtual age models and methodologies to bridge various research gaps present in the available literature A summary of deliverables is as follows Presents the basic concepts of maintenance and provides a virtual age model that can accommodate all maintenance Provides the basic concepts of censoring in repairable

systems along with the concept of black box and failure modes Also highlighted is how the proposed work will be useful for industries conducting failure modes and effect analysis FMEA and estimating the mean residual life MRL of repairable systems Presents methodology that applies risk based threshold on intensity function and provides a threshold to declare the system component as high failure rate components HFRCs Identifying a system as HFRCs is an important task but for an industry dealing with critical systems preventing the system from being HFRC is more important since the risk involved in such systems would be very high Thus the book presents a progressive maintenance policy PMP for repairable systems Focusses on qualitative analysis of repair quality Assuming repair quality as a subjective variable the authors have presented various factors that affect the repair quality most and modeled their interdependency using Bayesian networks BN Audience Professional reliability engineers reliability administrators consultants managers and post graduate students in engineering schools The book belongs to any engineering technical and academic institution concerned with manufacturing production aviation defense and software industries
