1808-1916 in v 11-27 **Selected Topics in Myasthenia Gravis** Isam Jaber Al-Zwaini, Ali AL-Mayahi, 2019-06-12 Myasthenia
gravis is a rare potentially fatal chronic autoimmune disorder Circulating autoantibodies directed against components of the
neuromuscular junction of skeletal muscles most commonly nicotinic acetylcholine receptor and associated protein in the
postsynaptic membrane block neuromuscular transmission resulting in muscle weakness This muscle weakness typically
worsens with continued activity improves on rest and is of variable severity ranging from mild ocular muscle weakness to
severe generalized muscle weakness involving the respiratory muscle with impending respiratory failure The worldwide
prevalence of myasthenia gravis is 100-200 per million population affecting more than 700,000 people all over the world The
prevalence rate has increased since the 1950s due to improved diagnostic precision and decreased mortality rate

Myasthenia Gravis David Grob, New York Academy of Sciences, 1981 **Neurochemical Systems and Signaling** Ghulam
Md Ashraf, 2023-06-30 The human brain is made up of billions of neurons that communicate with each other through
chemical messengers which are referred to as neuroactive substances These neuroactive substances include
neurotransmitters neuromodulators and neurohormones Some neurotransmitters also act as neuromodulators and
neurohormones It is unlikely that there would ever be a consensus about the meanings of these neuroactive substances
including neurotransmitters since the term neurotransmitter has traditionally been used very loosely indeed to include
neurotransmitters neurohormones and neuromodulators Any alterations in the functioning of these neuroactive substances
can cause diseases The brain is the ultimate center that regulates all neurological and behavioral aspects of the body through
neuronal communications mediated via various neurochemicals Thus neurological and psychiatric disorders are in most cases
the result of disturbed neurochemical balance Besides the multifaceted involvement of billions of neuronal cells the central
nervous system is a complex organization with a diverse number of neurotransmitter systems as compared to the autonomic
nervous system in which the parasympathetic system works on the rest and digest phenomenon and the sympathetic system

works on the fight or flight phenomenon There are more than 20 neurotransmitter systems and multiple receptors for each neurotransmitter Any alterations in neurochemical balance are expressed in the form of neurological or psychiatric disorders such as epilepsy Parkinson s disease Alzheimer s disease psychosis depression etc Acetylcholine noradrenaline dopamine and 5 HT are of the utmost importance among neurotransmitters for their profound role in the pathogenesis of various neurological and psychiatric disorders in humans Yet the involvement of various proteins and peptides such as neurotrophic factors growth factors and endogenous chemical compounds cannot be ignored Day by day the suffering of people due to an imbalance of neurotransmitters is increasing Various factors for example stress diet genetics and toxins such as alcohol and nicotine contribute to this imbalance This imbalance may lead to mental health complaints The main purpose of this book is to give a comprehensive overview of the neurological diseases associated with neurochemical imbalances This book will help readers gain a comprehensive understanding of neuronal signaling and related neurological disorders as well as status and future opportunities and challenges It will provide a brief account of neurotransmission as either a study or high yield revision aid
