Myopia and the Control of Eye Growth Gregory R. Bock, Kate Widdows, 2008-04-30 Myopia the most common disorder of the eye affects 80% of the population of some countries Although its basis remains uncertain recent development of animal models have permitted tests of hypothesis as to myopia's origins The symposium proceedings cover normal growth of the eye including the roles of peptide factors metabolism and accommodation investigation of the deficiencies that lead to myopia and other refractive disorders

Myopia and the Control of Eye Growth Gregory Bock, Kate Widdows, 1990 Myopia and the Control of Eye Growth Chairman J Wallman 1990 Myopia is the most common disorder of the eye affecting 80% of the population in some countries Its basis remains uncertain recent developments of animal models of myopia have permitted experimental tests of hypotheses about possible aetiological causes This symposium covers the normal growth of the eye and the involvement of metabolism accommodation and other factors in normal and abnormal growth The deficiencies that lead to myopia and other refractive disorders are discussed Aspects of retinal anatomy and physiology relevant to the understanding of the biological factors limiting visual resolution are described The effects of neurotransmitters and neurotoxins on eye growth reveal information about the nature of normal and experimentally manipulated eye growth and development The multiplicity of theories about the aetiology of myopia has led to numerous therapeutic approaches the effectiveness of such therapies is debated Animal models of myopia have demonstrated the importance of patterned visual input to the developing eye and the ability of the eye to recover if the constraint that caused the myopia is removed early enough These findings are significant for the detection and correction of myopia in newborn human infants Other Ciba Foundation Symposia No 126 Selective neuronal death Chairman H Wisniewski 1987 ISBN 0 471 91092 9 No 143 The biology of hyaluronan Chairman T C Laurent 1989 ISBN 0 471 92305 2 No 146 Photosensitizing compounds their chemistry biology and clinical use Chairman T J Dougherty 1989 ISBN 0 471 92308 7 No 149 Human genetic information science law and ethics Chairman Sir Gustav Nossal 1990 ISBN 0 471 92624 8

Wissinger, S. Kohl, U. Langenbeck, F. Bandello, 2003-07 The objective of this publication is to enhance mutual understanding and communication between ophthalmologists molecular geneticists genetic counselors and biomedical researchers In the introductory chapter current genetic paradigms and experimental genetic approaches relevant to the nature of hereditary disorders are discussed The following contribution on the epidemiology of hereditary ocular disorders provides an excellent reference to geneticists as well as clinicians Myopia is presented as an example of a complex clinical phenotype where genes and environment interact Further molecular ophthalmogenetic topics such as corneal dystrophies cataract glaucoma optic neuropathy non syndromic and syndromic pigmentary retinopathies defects of vitamin A metabolism and macular dystrophies including age related macular degeneration are investigated in depth The volume concludes with a survey of color vision deficiencies a discussion of animal models and gene therapy and a useful description of technical devices supporting patients who are losing sight *Development of the Visual System* S.P. Bhat, 2004-01-01 All the tissues of the eye including the lens the cornea the ciliary body the neuroretina and the retinal pigment epithelium must work in harmony for the realization of clear vision The phenotypic emergence of each of these tissues requires intercellular communication which is achieved through direct physical contact as well as through diffusion and reception of the molecular beacons This volume provides an overview of the molecular and cellular biology of eye development and encompasses themes like early gene expression in the surface ectoderm and the optic cup retinal neurogenesis signaling molecules and axonal guidance It presents new findings on the influence of the lens on the development of the visual system and how gene expression in the optic cup controls differentiation of the lens fiber cell while established ideas about the morphogenesis of the ciliary body are challenged A valuable source of information for developmental biologists and neurobiologists as well as ophthalmologists interested in understanding the relationship between temporally and spatially regulated gene activity and function and cellular interactions in early development and neuronal functions **Vitamin A** , 2019-05-15 This book is the most up to date research on vitamin A It is designed for scientists and researchers to deepen their knowledge in this critical knowledge field and it is a solid resource that brings together multidisciplinary research development and innovation for a varied analysis of vitamin A
