that are thought by some to exist on Earth but have yet to be properly documented by modern science Others in this category include the mysterious waterborne dinosaur like being popularly known as the Loch Ness monster as well as the goat eating Chupacabra of South America Due to the sheer volume of eyewitness accounts involving Bigfoot most people in the Western hemisphere recognize the general description of this creature What few may realize however is that the Sasquatch is not unique to North America Or at least stories of mysterious bipedal hominids are not From the mountainous regions of Nepal to the wild outback of Australia tales of such beings have existed throughout history In many cases the descriptions of these creatures seem to match Bigfoot So then a few questions naturally arise Are these all part of a singular long lost species of great ape or are they separate beings with different genetic lineages How similar are they to each other where do they live and is there any evidence of their existence We will explore the answers to these questions and many more in this book
