report about the future of Britain's cities and communities but sets them in an international and historical context. Professionals, architects, engineers, and developers, as well as academics from different countries and disciplines, here lavish their expertise on issues of transportation, density, land use, risk, and energy saving. Others present urban-scale buildings or landscapes that have been judged inspirational or inventive. This book therefore is not just about theories of urbanism. It reveals how co-operation and debate between different parties and professions can illuminate the creative kind of urban development we should be aiming for.

"Doing it the Hard Way" Sally Hacker, 1990. This is a posthumous collection of the most seminal work of the American sociologist Sally Hacker woven together with a series of interviews conducted during the last year of her life.

Tools, Totems, and Totalities Allen Batteau, Christine Z. Miller, 2025-02-11. This book provides a critical perspective on technology, answering the questions of why technologies often disappoint. It takes a sociotechnical and historical perspective on technology as developed by an engineer, anthropologist, and a design anthropologist to answer questions not only about why modern societies have great expectations of technology but also of why these technologies often fail to meet expectations. Modern societies often search for technological solutions, technofixes, to what are institutional problems which include border crossings or urban mobility or improvements in productivity or improved communication. It is disappointing when technofixes, whether border walls or driverless cars or social media, fail to live up to their promises of greater personal autonomy such as afforded by driverless cars or improved social harmony through social media. Examining technology from the perspectives of instrumentality, tools, identity, totems, and world-defining systems, totalities develops a comprehensive perspective that is at once historically informed and cross-culturally accurate. Although instrumentality is obvious and is at the core of any understanding of technology, identity is less so, yet many modern tribes create their identity in terms of technological objects and systems, whether transport systems, cars, and airplanes or social media or weapons, guns. Further, modern technologies span the globe so that they exert imperative coordination over distant populations; the use of cell phones around the world is testimony to this fact. Such a critical perspective on technology can be useful in policy discussions of numerous issues affecting contemporary institutions.
