Neurosecretion And Neuroendocrine Activity Evolution Structure And Function:

Neurosecretion and Neuroendocrine Activity W. Bargmann, A. Oksche, A. Polenov, B. Scharrer, 2012-12-06 This volume on the evolutionary aspects of neuro endocrinology is based on contributions from the 7th International Symposium on Neurosecretion which took place in Leningrad on August 15 21 1976 The book deals with three major approaches in elucidating the general evolutionary events responsible for the structure and function of neurosecretory elements 1 phylogenetic development of neurosecretory elements and their function 2 ontogenetic development of neurosecretory elements and their function and 3 the role of neuroendocrine mechanisms in realizing species adaptation i e mechanisms causing the evolutionary process Half of the chapters deal with evolutionary aspects The majority of them are concerned with the role of different types of neurosecretory cells in the regulation of homeostasis and of the function of endocrine glands primarily that of the adenohypophysis The other half are concerned with various aspects of neurosecretion featuring two main problems 1 investigation of neural and hormonal mechanisms regulating the function of neurosecretory cells and neurosecretory centers as a whole and 2 investigation of the role of neurosecretory systems in the regulation of adaptive reactions of the organism

Structure and Function of Peptidergic and Aminergic Neurons Yutaka Sano, Yasuhiko Ibata, Earl A. Zimmerman, 1983-12 Chemical markers have brought important new dimensions to the studies of the brain As a result of this development the chemical anatomy of the neurons system is being explored in great detail This new functional neuroanatomy has demonstrated new organizations of perikaryal groupings of neurons and pathways from these cells which often follow unexpected courses The field of chemical identification has recently been improved by methods reported in this volume e g serotonin localization and direct labelling of cholinergic neurons The new techniques provide a new pair of glasses for everyone working in this field This volume will be of great interest for researchers in neuropharmacology neuroanatomy immunochemistry neuroendocrinology neuroscience and cell biology

Scientific Directory and Annual Bibliography National Institutes of Health (U.S.), 1979 Each issue lists papers published during the preceding year

Integument, Respiration and Circulation G. A. Kerkut, 2013-10-22 This volume is primarily devoted to the analysis of the integument epidermis cuticle the fat body the connective tissues the circulatory and respiratory systems It discusses the organization and functioning of the insect systems implicated in growth intermediary metabolism homeostasis and defence mechanisms Much of the volume is devoted to anatomical and structural developments which appear as introductions to corresponding biochemical and physiological aspects Many diagrams drawings and photographs accompany the text throughout Altogether this volume presents a clear and up to date account of the most recent and important discoveries in the fields and shows the extent of progress which is expected in the near future

Functional Neuroanatomy N. J. Strausfeld, 2012-12-06 The functional in the title of this book not only reflects my personal bias about neuroanatomy in brain research it is also the gist of many chapters which describe sophisticated ways to resolve structures and interpret them as

dynamic entities Examples are the visualization of functionally identified brain areas or neurons by activity staining or intracellular dye iontophoresis the resolution of synaptic connections between physiologically identified nerve cells and the biochemical identification of specific neurons their peptides and transmitters by histo and immunocytochemistry I personally view the nervous system as an organ whose parts continuously exchanging messages arrive at their decisions by the cooperative phenomenon of consensus and debate This view is admittedly based on my own experience of looking at myriads of nerve cells and their connections rather than studying animal behaviour or theorizing Numerous structural studies have demonstrated that interneurons in the brain must receive hundreds of thousands of synapses Many neurons receive inputs from several different sensory areas each input conveys a message about the external world and possibly also about past events which are stored within the central nervous system Whether an interneuron responds to a certain combination of inputs may be literally a matter of debate whose outcome is decided at the post synaptic membrane A nerve cell responding to an overriding command is possibly a rare event

Functional Morphology of Neuroendocrine Systems Berta Scharrer, Horst-Werner Korf, Hans-Georg Hartwig, 2012-12-06 International Symposium Held at the Department of Anatomy and Cytology Justus Liebig University in Gießen July 30 August 1 1986

Organization in the Spinal Cord A. G. Brown, 2012-12-06 The research described in this book arose in large part from a sense of frustration For a number of years I had been studying the physiology of the spinocervical tract a somatosensory pathway in the cat's spinal cord But I did not know precisely where the cells of origin of the tract were located and therefore did not know what they looked like or whether there were any correlations between structure and function It was true that electrophysiological experiments had indicated their probable situation in the dorsal horn and anatomical work had described the morphology of cells that were likely to give rise to the axons of the tract but this was not satisfactory With the publication by Stretton and Kravitz in 1968 of the Procion Yellow ionophoretic method for intracellular staining a new tool became available for studying the morphology of physiologically identified neurones We used the techniques and although very pleased with the beautiful appearance of the dendritic trees of neurones seen in the fluorescence microscope we were again frustrated this time by the inability of Procion Yellow to stain axons for any considerable length Therefore P K Rose and P J Snow and I began to try to develop a method that would stain the axon together with its collaterals in addition to the soma and dendrites of an intracellularly recorded neurone

Pang, 2012-12-02 *Vertebrate Endocrinology Fundamentals and Biomedical Implications Volume 1 Morphological Considerations* provides information pertinent to vertebrate endocrine systems which has significant contributions to basic biological and biomedical research This book discusses the practical implications of the endocrinological studies Organized into 15 chapters this volume starts with an overview of the endocrine process in lower vertebrates which has provided basic information about the understanding of mammalian and human systems This text then discusses the pituitary gland which is considered to be functionally and structurally the most complex organ of the endocrine system Other chapters consider the function of the pineal organ as a sensory organ capable of perceiving light stimuli in poikilothermic vertebrates This book discusses as well the caudal neurosecretory system in lampreys hagfish holocephalans and dipnoans The final chapter provides the comparative morphology of the classical vertebrate endocrine organs Endocrinologists biologists graduate students and researchers will find this book useful *Acta Physiologica*, 1979

Neuroendocrinology Horst-Werner Korf, Klaus-Henning Usadel, 2012-12-06 70 years after the discovery of secretory neurons internationally leading experts gathered to discuss the latest developments in neuropeptide research and endocrinology concentrating on the molecular cellular supracellular and systemic aspects A variety of neuropeptidergic systems are considered under comparative and evolutionary aspects *Development of Hormone Receptors* G.
