educator **Reinventing STEM in Early Childhood Education** Eugene Geist, 2025-05-09 Teaching STEM to young children is about more than helping them learn their numbers and facts. It is an important and complex process that to be effective should honor the way children's brains are developing. This book outlines how early childhood educators can best support young children's STEM journeys as children naturally take in information about their environment, synthesize it, and grow in the process. This comprehensive text details different theories of learning, research on how young brains develop, practical information on preparing your environment and yourself for teaching STEM to children, guidance for supporting diverse populations of students, and developmental guidelines, sample standards, resources, and lesson plans. Organized chronologically, the book connects relevant STEM topics with each developmental age range and outlines common school standards for each grade. *Reinventing STEM in Early Childhood Education* is meant to be a core text for preservice teachers in math and science methods courses and is also important reading for teacher educators and professional development programs.

The Hidden History of Early Childhood Education Blythe Farb Hinitz, 2013-09-02 *The Hidden History of Early Childhood Education* explores topics that have traditionally been marginalized or ignored in early childhood education literature, such as home schooling, James Jimmy Hymes' early childhood education in Japanese internment camps, the Eisenhower legacy, and the civil rights movement.

The Political Economy of Contemporary Human Civilisation, Volume I Sangaralingam Ramesh, 2025-03-21 This book, the first of two volumes, examines the evolution of humanity and development, global economic systems, to provide insight into the advances and challenges they have created. By placing modern technology and global crises within the context of long-term human development, it evaluates the threat of climate change on future generations by showing how past civilizations have survived and succumbed to climate events. A similar approach is taken with migration, where the current migration crisis is contrasted against historic migration patterns. The potential for artificial intelligence, quantum computing, nuclear fusion, and biotechnology to combat these challenges, as well as tackle poverty and inequality, are also discussed. This book highlights the consequences of human cognition and the constant desire for economic growth and evaluates whether they have been a net positive for human society. It will be of interest to students and researchers working on political economy and global challenges.
