These important new essays show how changing patterns of health and disease have responded to and shaped notions of childhood and adolescence as life stages. Until the early 20th century life-threatening illnesses were a sinister presence in the lives of children of all social classes. Today many diseases and threats to child health have been eliminated or alleviated. Yet critical problems remain. New threats such as AIDS and violence take a steady toll. Child health remains an active concern for all families. Despite the development of health care policies, social welfare policies and effective medication, the home remains as it was in the Colonial period: the most critical site of care. Parents are still central to the preservation of children's health. This work imposes a holistic view of this experience for children and families. By examining the child's perspective of illness, the authors make an important contribution to the understanding of illness as part of the developmental process of growing up. *The History of Medicine and Healthcare* Lesley Bolton, William J. Pratt, Frank W. Stahnisch, 2021-03-24 This volume brings together such topics as the history of psychiatry, biomedical ethics in history, military medicine, children, women and changing gender roles in modern medicine, public health history and a special communication on the history of Canadian hospital workers. Of special note is a paper by internationally renowned historian Dr Peter L. Twohig, Canadian Research Chair in the History of the Atlantic World at Saint Mary's University in Halifax, Nova Scotia. It is well illustrated with images and diagrams pertaining to the history of medicine. **Infrahumanisms** Megan H. Glick, 2018-10-18 In *Infrahumanisms* Megan H. Glick considers how conversations surrounding nonhuman life have impacted a broad range of attitudes toward forms of human difference such as race, sexuality and health. She examines the history of human and nonhuman subjectivity as told through twentieth-century scientific and cultural discourses that include pediatrics, primatology, eugenics, exobiology and obesity research. Outlining how the category of the human is continuously redefined in relation to the infrahuman, a liminal position of speciation existing between the human and the nonhuman, Glick reads a number of phenomena from early twentieth-century efforts to define children and higher-order primates as liminally human and the postwar cultural fascination with extraterrestrial life to anxieties over AIDS, SARS and other cross-species diseases. In these cases, the efforts to define a universal humanity create the means with which to reinforce notions of human difference and maintain human/nonhuman hierarchies. In foregrounding

how evolving definitions of the human reflect shifting attitudes about social inequality Glick shows how the consideration of nonhuman subjectivities demands a rethinking of long held truths about biological meaning and difference *The Sick Child in Early Modern England, 1580-1720* Hannah Newton, 2012-04-19 The Sick Child in Early Modern England is a powerful exploration of the treatment perception and experience of illness in childhood from the late sixteenth to the early eighteenth century At this time the sickness or death of a child was a common occurrence over a quarter of young people died before the age of fifteen and yet this subject has received little scholarly attention Hannah Newton takes three perspectives first she investigates medical understandings and treatments of children She argues that a concept of children s physic existed amongst doctors and laypeople the young were thought to be physiologically distinct and in need of special medicines Secondly she examines the family s experience demonstrating that parents devoted considerable time and effort to the care of their sick offspring and experienced feelings of devastating grief upon their illnesses and deaths Thirdly she takes the strikingly original viewpoint of sick children themselves offering rare and intimate insights into the emotional spiritual physical and social dimensions of sickness pain and death Newton asserts that children s experiences were characterised by profound ambivalence whilst young patients were often tormented by feelings of guilt fears of hell and physical pain sickness could also be emotionally and spiritually uplifting and invited much attention and love from parents Drawing on a wide array of printed and archival sources The Sick Child is of vital interest to scholars working in the interconnected fields of the history of medicine childhood parenthood bodies emotion pain death religion and gender **Engineering Society** Kerstin Brückweh, Richard F. Wetzell, 2012-10-09 Explaining crime by reference to abnormalities of the brain is just one example of how the human and social sciences have influenced the approach to social problems in Western societies since 1880 Focusing on applications such as penal policy therapy and marketing this volume examines how these sciences have become embedded in society *Handbook of dietary and nutritional aspects of bottle feeding* Victor R. Preedy, Ronald Ross Watson, Sherma Zibadi, 2023-08-07 Newborn babies are usually fed via the breast which ensures optimal development and emotional mother child bonding However in some circumstances breast feeding may be either inadequate or impractical Historically deficiencies in the provision of breast milk were addressed by wet nurse feeding but this was superseded by the introduction of artificial milk feeds i e formula or bottle feeds This handbook covers formula feeds in the most comprehensive way Each contribution starts with convenient summary points Six parts give information about historical and international aspects South American African and Chinese perspectives composition microbiological and chemical contaminants allergy and immunology effects on physical development and metabolic responses and effects on psychological and neurodevelopment The Handbook of dietary and nutritional aspects of bottle feeding is essential reading material for nutritionists dieticians paediatricians midwives pharmacologists health care professionals general practitioners and those interested in babies health in general Parenting George W.
