NUREG/CR. U.S. Nuclear Regulatory Commission, 1980 Medical consequences of nuclear warfare, 1989 **Virgil C. Summer Nuclear Station Unit 1, Operation**, 1981 **The Disposition Dilemma** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission-Licensed Facilities, 2002-06-13 The U S Nuclear Regulatory Commission USNRC and its predecessor the U S Atomic Energy Commission AEC have attempted since the 1970s to give greater uniformity to the policy and regulatory framework that addresses the disposition of slightly radioactive solid material The issue remains unresolved and controversial The USNRC has tried to issue policy statements

and standards for the release of slightly radioactive solid material from regulatory control while such material has been released and continues to be released under existing practices In 1980 the USNRC proposed regulatory changes to deregulate contaminated metal alloys but withdrew them in 1986 and began work with the Environmental Protection Agency EPA to develop more broadly applicable federal guidance In 1990 the USNRC issued a more sweeping policy as directed by the Low Level Radioactive Waste Policy Amendments Act of 1985 LLWPAA declaring materials with low concentrations of radioactivity contamination below regulatory concern BRC and hence deregulated Congress intervened to set aside the BRC policy in the Energy Policy Act of 1992 after the USNRC's own suspension of the policy Subsequent attempts by USNRC staff to build consensus among stakeholder groups as a basis for future policy articulations were met by boycotts of stakeholder meetings both in the immediate aftermath of the BRC policy and again in 1999 during public hearings on a new examination of the disposition of such materials The only USNRC standard addressing the disposition of slightly radioactive solid material is a guidance document published in June 1974 by the AEC whose regulatory authority over civilian nuclear facilities the USNRC assumed upon its creation a few months later in January 1975 In August 2000 with another examination of this issue under way the USNRC requested that the National Research Council form a committee to provide advice in a written report The National Research Council established the Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities to address this task The committee's task involved evaluating and providing recommendations on the history of the technical bases and policies and precedents for managing slightly radioactive solid material from USNRC licensed facilities the sufficiency of technical bases needed to establish standards for release of solid materials from regulatory control clearance standards and the adequacy of measurement technologies the concerns of stakeholders and how the USNRC should incorporate them and the efforts of international organizations on clearance standards The committee was also asked to examine the current system for release of slightly radioactive solid material from regulatory control to recommend whether the USNRC should continue to use this system and to recommend changes if appropriate The committee's fact finding process included two site visits to waste brokering facilities and nearly 40 invited presentations from the USNRC the U S Department of Energy DOE and EPA staff stakeholder organizations nuclear industry organizations and other interested parties In conducting its study the committee first examined the current system of standards guidance and practices used by the USNRC and agreement states to determine whether to release slightly radioactive solid material from further regulatory control under the Atomic Energy Act The committee found that the current workable system allows licensees to release material according to pre established criteria but contains inconsistencies such that nuclear reactor licensees can release materials only if there is no detectable radioactivity above background levels whereas materials licensees can do so if small detectable levels are found The committee evaluated technical analyses of the estimated doses of the final disposition of slightly radioactive solid materials These analyses were

conducted by federal agencies and international organizations including the International Atomic Energy Agency IAEA the European Commission and other groups The Disposition Dilemma Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities explains the committee's findings and recommendations *Medical Consequences of Nuclear Warfare* Leonard A. Alt, 1989 Radiation Carcinogenesis Arthur C. Upton, 1986 This book provides the first comprehensive and systematic survey of present knowledge about radiation carcinogenesis World experts review in detail current information on such topics as the incidence of various forms of cancer in irradiated populations the carcinogenic effects of ionizing radiation in laboratory animals theoretical mechanisms of radiation carcinogenesis and the implications of the data for assessing the risks of human cancer In view of recent controversy about the carcinogenic hazards of low level exposure to radiation and other carcinogens this book is a timely contribution toward our understanding of the carcinogenic risks of low level radiation ISCORS assesement [sic] of radioactivity in sewage sludge radiological survey results and anaysis , **Handbook of Nuclear Engineering** D. G. Cacuci, 2010-09-14 This is an authoritative compilation of information regarding methods and data used in all phases of nuclear engineering Addressing nuclear engineers and scientists at all levels this book provides a condensed reference on nuclear engineering since 1958 **Generic EIS for Nuclear Power Plant Operating Licenses Renewal** , 1996 *Waterford Steam Electric Station Unit 3, Operation* , 1981 **Radiation Protection Management** , 1998 **Selman's The Fundamentals of Imaging Physics and Radiobiology** Victor White, 2020-10-16 This tenth edition of Selman's The Fundamentals of Imaging Physics and Radiobiology is the continuation of a seminal work in radiation physics and radiation biology first published by Joseph Selman MD in 1954 by Charles C Thomas Publisher Ltd Springfield IL Many significant changes have been made in this tenth edition Color photographs and new illustrations have been provided for several existing chapters and for the new chapters in this book Revisions and updates have been completed for Chapters 1 through 28 whereas Chapters 29 to 33 are all new The overall style of Doctor Selman is still present but with any revision the style of the present author is also present In essence the author's reason d'être in revising this book was to better reflect current radiology practice and to honor the work of Doctor Selman Topics discussed in this textbook deal with the physics of x radiation the biological interaction of radiation with matter and all aspects of imaging equipment and technology commonly found in the modern radiology department The chapter on computed tomography CT has been heavily revised and updated Protective measures regarding radiation safety and radiation hazards for workers and patients are thoroughly discussed and new chapters on dual energy x ray absorptiometry DXA magnetic resonance imaging MRI ultrasound US fusion and molecular imaging have been added This book will be very helpful to students about to take the ARRT R registry examination but it is not a registry review book per se This book also serves as a good overview of radiologic imaging physics for radiographers and other medical professionals *Radiation Exposure of the U.S. Population from Consumer Products and Miscellaneous Sources* National Council on
