Radiation Dosimetry C.G. Orton, 2013-06-29 Mankind has evolved in a sea of radiation We have been bombarded constantly by X rays y rays UV rays and particulate radiations from outer space and by terrestrial radiations from the ground we walk on from our building materials and from our own bodies Recently we have become increasingly subjected to man made radiations especially from the medical and defense industries

All of these radiations are capable of affecting us biologically both to our benefit and to our detriment This book provides a thorough review of the physical and biological dosimetry of these radiations It is targeted to those health professionals who are concerned with understanding the mechanisms fundamental to the biological action of ionizing radiation or who are involved in the application measurement or treatment of the effects of such radiations The first chapter on Bioeffect Dosimetry in Radiation Therapy should be of special interest to anyone involved in the treatment of cancer by radiation It includes a brief review of the history of the manipulation of time dose parameters in order to improve therapeutic benefit and an up to date analysis of time dose relationships designed for use in fractionated radiotherapy and brachytherapy This is followed by two chapters reviewing and comparing national and international protocols for the precise measurement of photon and electron radiations in therapy These chapters should be invaluable to radiation physicists responsible for treatment machine calibrations

Introduction to Radiation Protection Dosimetry Jozef Sabol, Baoshan Weng, 1995 One essential characteristic of life is the exchange of matter and energy between organisms and their environment Radiation is a form of energy that has always been around in nature and will forever be the companion of human beings throughout life In order to assess the impact of radiation exposures properly it is essential to introduce appropriate quantities and units which can then be used for quantification of exposures from various sources In principle radiation protection is mainly aimed at controlling radiation exposure while radiation dosimetry deals primarily with the measurement of relevant radiation quantities especially doses This book is divided into two parts The first contains up to date definitions of the most significant radiation quantities including their interpretation In the second part the exposures of both individuals and population at large to various types of natural and man made sources are compared and discussed The concept of quantities and units as well as analysis of exposure due to various sources in our environment is based on the latest highly regarded authentic sources such as ICRU ICRP IAEA and particularly UNSCEAR reports and recommendations The material reflects the latest review of the current terminology in radiation protection dosimetry and the contemporary assessment of radiation exposures of the population radiation workers and patients

Topics in Radiation Dosimetry Frank H. Attix, 2013-10-02 Radiation Dosimetry Supplement 1 Topics in Radiation Dosimetry covers instruments and techniques in dealing with special dosimetry problems The book discusses thermoluminescence dosimetry in archeological dating dosimetric applications of track etching vacuum chambers of radiation measurement The text also describes wall less detectors in microdosimetry dosimetry of low energy X rays and the theory and general applicability of the gamma ray theory of track effects to various systems Dose equivalent determinations in neutron fields by means of moderator techniques as well as developments in radiophotoluminescence dosimetry are also considered Physicists mathematicians and archeologists will find the book useful

Nuclear Medicine Radiation Dosimetry Brian J McParland, 2010-07-03 Complexities of the requirements for accurate radiation dosimetry evaluation in both diagnostic and therapeutic nuclear medicine including PET have grown over the past decade This is due primarily to four factors Growing consideration of accurate patient specific treatment planning for radionuclide therapy as a means of improving the therapeutic benefit development of more realistic anthropomorphic phantoms and their use in estimating radiation transport and dosimetry in patients Design and use of advanced Monte Carlo algorithms in calculating the above mentioned radiation transport and dosimetry which require the user to have a thorough understanding of the theoretical principles used in such algorithms their appropriateness and their limitations increasing regulatory scrutiny of the radiation dose burden borne by nuclear medicine patients in the clinic and in the development of new radiopharmaceuticals thus requiring more accurate and robust dosimetry evaluations An element common to all four factors is the need for precise radiation dosimetry in nuclear medicine which is fundamental to the therapeutic success of a patient undergoing radionuclide therapy and to the safety of the patients undergoing diagnostic nuclear medicine and PET procedures As the complexity of internal radiation dosimetry applied to diagnostic and therapeutic nuclear medicine increases this book will provide the theoretical foundations for enabling the practising nuclear medicine physicist to understand the dosimetry calculations being used and their limitations allowing the research nuclear medicine physicist to critically examine the internal radiation dosimetry algorithms available and under development and providing the developers

of Monte Carlo codes for the transport of radiation resulting from internal radioactive sources with the only comprehensive and definitive

An Introduction to Radiation Dosimetry S. Lovell, 1979-09-13 First published in 1979 this volume presents an elementary and as far as is practicable non mathematical introduction to radiation dosimetry Where it proved necessary to use mathematical notation it was kept to a simple level The volume treats dosimetry from first principles dealing with the interaction of the various radiations with matter then defining dosimetric quantities and units and showing how the more important ones are measured It concludes with a brief chapter on radiation protection Although a number of dosimetric systems are described in some detail the treatment is by no means encyclopaedic SI units appear throughout including some which were not yet in universal use when the book was first published Where it was considered necessary the older non SI units were also defined and conversion factors were given
