Irradiation Embrittlement of Reactor Pressure Vessels (RPVs) in Nuclear Power Plants Naoki

Soneda, 2014-09-01 Reactor Pressure Vessels RPVs contain the fuel and therefore the reaction at the heart of nuclear power plants. They are a life determining structural component; if they suffer serious damage, the continued operation of the plant is in jeopardy. This book critically reviews irradiation embrittlement, the main degradation mechanism affecting RPV steels, and mitigation routes for managing the RPV lifetime. Part I reviews RPV design and fabrication in different countries with an emphasis on the materials required, their important properties, and manufacturing technologies. Part II then considers RPV embrittlement in operational nuclear power plants using different reactors. Chapters are devoted to embrittlement in light water reactors including WWER type reactors and Magnox reactors. Finally, Part III presents techniques for studying embrittlement, including irradiation simulation techniques, microstructural characterisation techniques, and probabilistic fracture mechanics. *Irradiation Embrittlement of Reactor Pressure Vessels RPVs in Nuclear Power Plants* provides a thorough review of an issue that is central to the safety of nuclear power generation. The book includes contributions from an international team of experts and will be a useful resource for nuclear plant operators and managers, relevant regulatory and safety bodies, nuclear metallurgists, and other academics in this field. Discusses reactor pressure vessel RPV design and the effect irradiation embrittlement can have, the main degradation mechanism affecting RPVs. Examines embrittlement processes in RPVs in different reactor types as well as techniques for studying RPV embrittlement. [Radiation Damage of Structural Materials](#) J. Koutský, J. Kocík, 2013-10-22 Maintaining the integrity of nuclear power plants is critical in the prevention or control of severe accidents. This monograph deals with both basic groups of structural materials used in the design of light water nuclear reactors, making the primary safety barriers of NPPs. Emphasis is placed on materials used in VVER type nuclear reactors: Cr-Mo-V and Cr-Ni-Mo-V steel for RPV and Zr-Nb alloys for fuel element cladding. The book is divided into 7 main chapters, with the exception of the opening one and the chapter providing a phenomenological background for the subject of radiation damage. Chapters 3-6 are devoted to RPV steels and chapters 7-9 to zirconium alloys, analysing their radiation damage, structure changes, mechanical properties due to neutron irradiation, as well as factors influencing the degree of their performance degradation. The recovery of damaged materials is also discussed. Considerable attention is paid to a comparison of VVER type and western type light water materials. This monograph will be of great value to postgraduate students in nuclear engineering and materials science and for designers and research workers in nuclear energy.
