**Radiative Heat Exchange in the Atmosphere** K. Ya. Kondrat'Yev, 2013-09-03 Radiative Heat Exchange in the Atmosphere analyzes the concerns in thermal radiation and the radiation balance of the earth's surface and of the atmosphere The text first covers the basic definitions and concepts and then proceeds to discussing the development of basic theories of actinometric measurements of thermal radiation fluxes Next the selection deals with the absorption of long wave radiation in the atmosphere In the fourth chapter the title covers the solution of the problem of radiative heat transfer in the atmosphere Chapter 5 details the examination of the approximate methods of calculation of thermal radiation fluxes while Chapter 6 discusses the problem of the atmosphere and the net radiation at the ground The seventh chapter tackles the radiation balance and the last chapter covers the features of the methods and the results of calculating temperature changes caused by radiation The book will be of great use to researchers and practitioners of astrophysics and meteorology Ecologists and other environmental scientist will also benefit from the text

**Radiative Heat Transfer During Atmosphere Entry at Parabolic Velocity** Kenneth K. Yoshikawa, Bradford H. Wick, 1961 Stagnation point radiative heating rates for manned vehicles entering the earth's atmosphere at parabolic velocity are presented and compared with corresponding laminar convective heating rates The calculations were made for both nonlifting and lifting entry trajectories for vehicles of varying nose radius weight to area ratio and drag It is concluded from the results presented that radiative heating will be important for the entry conditions considered *Thermal Radiation Heat Transfer, Fourth Edition* Robert Siegel, 2001-12-07 This extensively revised 4th edition provides an up to date comprehensive single source of information on the important subjects in engineering radiative heat transfer It presents the subject in a progressive manner that is excellent for classroom use or self study and also provides an annotated reference to literature and research in the field The foundations and methods for treating radiative heat transfer are developed in detail and the methods are demonstrated and clarified by solving example problems The examples are especially helpful for self study The treatment of spectral band properties of gases has been made current and the methods are described in detail and illustrated with examples The combination of radiation with conduction and or convection has been given more emphasis nad has been merged with results for radiation alone that serve as a limiting case this increases practicality for energy transfer in translucent solids and fluids A comprehensive catalog of configuration factors on the CD that is included with each book provides over 290 factors in algebraic or graphical form Homework problems with answers are given in each chapter and a detailed and carefully worked solution manual is available for instructors
