Radical Reactions Of Fullerenes And Their Derivatives:

Radical Reactions of Fullerenes and their Derivatives B.L. Tumanskii, O. Kalina, 2006-04-11 The discovery of fullerenes species belonging to the electron deficient polyalkenes with weakly conjugated double bonds has opened novel opportunities for the radical chemistry Pioneering study in this field was performed by P J Krusic E Wasserman P N Keizer J R Morton and K F Preston Science 1991 254 1184 The fullereryl radical adducts formed via addition of atoms or free radicals to fullerenes have no analogs in organic chemistry In fact radicals in which the unpaired electrons are delocalized over the surface of a sphere or ellipsoid have never been studied before The unusual character of the fullereryl radicals is also due to the fact that they occupy a sort of intermediate position between the planar and tetrahedral radicals Thus the elucidation of the characteristic features of fullereryl radicals and their reactivity by EPR spectroscopy and the comparison of the results with those of quantum chemical studies are of fundamental importance Isolation of the products from homolytic reactions of fullerenes in bulk amounts opens the door to large scale preparation of new organic and organoelement derivatives of including biologically active ones Radical reactions of fullerenes find wide application in the synthesis of fullerene containing polymers with valuable photophysical characteristics Ferromagnetism of the complex of with tetra dimethylamino ethylene found lends impetus to a search of novel methods for preparation of biradicals one unpaired electron of those is located on the fullerene cage while the other retained by the addend
