Radiocarbon And Archaeology:

Radiocarbon Dating R.E. Taylor, Ofer Bar-Yosef, 2016-06-03 This volume is a major revision and expansion of Taylor's seminal book *Radiocarbon Dating: An Archaeological Perspective*. It covers the major advances and accomplishments of the ¹⁴C method in archaeology and analyzes factors that affect the accuracy and precision of ¹⁴C based age estimates. In addition to reviewing the basic principles of the method, it examines ¹⁴C dating anomalies and means to resolve them and considers the critical application of ¹⁴C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology. This volume again a benchmark for ¹⁴C dating critically reflects on the method and data that underpins in so many cases the validity of the chronologies used to understand the prehistoric archaeological record.

Radiocarbon Dating Sheridan Bowman, 1990-01-01 *Radiocarbon Dating* is a unique handbook that should find its way as a standard reference for most archaeologists. Meyer Rubin, Director, Radiocarbon Laboratory, United States Geological Survey.

[Radiocarbon User's Handbook](#) Richard Gillespie, 1986 *Radiocarbon Dating*, 1974 [The Bible and Radiocarbon Dating](#) Thomas Levy, Thomas Higham, 2014-12-05 Over the past several years a number of Levantine archaeologists working on the Iron Age ca 1200-586 BCE have begun to employ high precision radiocarbon dating to solve a wide range of chronological, historical and social issues. The incorporation of high precision radiocarbon dating methods and statistical modelling into the archaeological tool box of the Biblical archaeologist is revolutionizing the field. In fact, Biblical archaeology is leading the field of world archaeology in how archaeologists must deal with history, historical texts and material culture. A great deal of debate has been generated by this new research direction in southern Levantine Israel, Jordan, Palestinian territories, southern Lebanon, Syria, the Sinai, archaeology. This book takes the pulse of how archaeology, science based research methods and the Bible interface at the beginning of the 21st century and brings together a leading team of archaeologists, Egyptologists, Biblical scholars, radiocarbon dating specialists and other researchers who have embraced radiocarbon dating as a significant tool to test hypotheses concerning the historicity of aspects of the Old Testament or Hebrew Bible. As this book raises the bar in how archaeologists tackle historical issues as manifest in the interplay between the archaeological record and text, its interest will go well beyond the Holy Land.

Radiocarbon Dating R Taylor, 2012-12-02 *Radiocarbon Dating: An Archaeological Perspective* provides a review of some of the major advances and accomplishments of the ¹⁴C method from an archaeological perspective. The text also provides an introduction to some of the problems and issues involved in the use of ¹⁴C data in archaeological studies. The book covers topics in radiocarbon dating including the elements of the radiocarbon method, definition of major anomalies and the different effects of the ¹⁴C method and sample pretreatment and measurement techniques. The evaluation of radiocarbon data and the historical development of radiocarbon dating as a method that aids in archaeological studies are also discussed. The text is recommended for archaeologists who want to know more about the theories and principles behind radiocarbon dating, its

techniques and its application in their field The book will also be good for physicists who want to work with archaeologists and apply their knowledge in radiocarbon dating

The Human Face of Radiocarbon

Zoï Tsirtsoni,2016-02-01 *Geoarchaeology and Radiocarbon Chronology of Stone Age Northeast Asia* Vladimir V.

Pitul'ko,Elena Yu. Pavlova,2016-04-08 This English translation of a work previously published in Russian *Geoarkheologiya i radiouglerodnaya khronologiya kamennogo veka Severo Vostochnoi Azii* St Petersburg Nauka 2010 presents an overview of the Paleolithic archaeology of Northeast Asia with emphasis on geoarchaeological and radiocarbon based chronology Although archaeological investigations above the Arctic Circle began more than two hundred years ago access to and publication of findings has been difficult In *Geoarchaeology and Radiocarbon Chronology of Stone Age Northeast Asia*

veteran researchers Vladimir V Pitulko and Elena Yu Pavlova have gathered and analyzed the available data to provide comprehensive documentation of human occupation of continental territories far above the Arctic Circle in the late Neopleistocene also known as the Late Pleistocene era. By using uncalibrated radiocarbon dating Pitulko and Pavlova have been able to establish reliable correlations between the artifacts and phenomena being studied. The increased number of radiocarbon age determinations for these Arctic sites is the most important data to come from the latest studies of Northeast Asia offering a significant opportunity for re-evaluation of older materials in light of these new findings. The authors include reporting on recent work performed at two of the most important sites in the region: the mammoth cemetery site at Berelekh and the Yana Rhinoceros Horn Site. **Radiocarbon Dating as a Tool in Archaeology** Henry Anthony Polach, 1965

Radiocarbon After Four Decades Ervin Taylor, Austin Long, Renee S. Kra, 1992-04-16 *Radiocarbon After Four Decades: An Interdisciplinary Perspective* commemorates the 40th anniversary of radiocarbon dating. The volume presents discussions of every aspect of this dating technique as well as chronicles of its development and views of future advancements and applications. All of the 64 authors played major roles in establishment, development or application of this revolutionary scientific tool. In addition, the original Volume 1 on Meteorites, Comets and Planets was expanded into two separate volumes dealing with

meteorites and planets respectively. These additions increased the number of volumes in the Treatise from 9 to 15, with the index and appendices volume remaining as the last volume, Volume 16. Each of the original volumes was scrutinized by the appropriate volume editors with respect to necessary revisions as well as additions and deletions. As a result, 27% were republished without major changes, 66% were revised, and 126 new chapters were added. In a many-faceted field such as Geochemistry, explaining and understanding how one sub-field relates to another is key. Instructors will find the complete overviews with extensive cross-referencing useful additions to their course packs, and students will benefit from the contextual organization of the subject matter. Six new volumes were added, and 66% updated from the 1st edition. The Editors of this work have taken every measure to include the many suggestions received from readers and ensure comprehensiveness of coverage and added value in this 2nd edition. The esteemed Board of Volume Editors and Editors in Chief worked cohesively to ensure a uniform and consistent approach to the content, which is an amazing accomplishment for a 15-volume work. 16 volumes including index volume.
