Radiolabeled Monoclonal Antibodies For Imaging And Therapy:

Radiolabeled Monoclonal Antibodies for Imaging and Therapy Suresh C. Srivastava, 2013-03-14 The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor associated antigens has during the last decade provided a very powerful tool for research and clinical investigations These highly specific reagents have essentially replaced the polysera of the earlier days The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine In particular the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich's concept of the magic bullet Indeed the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease Much work remains to be done however and even though the progress has been impressive results to date have shown only moderate success There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come

Radiolabeled Monoclonal Antibodies for Imaging and Therapy, 1986 This meeting focused on areas of research on radiolabeled monoclonal antibodies Topics covered included the production purification and fragmentation of monoclonal antibodies and immunochemistry of hybridomas the production and the chemistry of radionuclides the radiohalogenation and radiometal labeling techniques the in vivo pharmacokinetics of radiolabeled antibodies the considerations of immunoreactivity of radiolabeled preparations the instrumentation and imaging techniques as applied to radioimmunodetection the radiation dosimetry in diagnostic and therapeutic use of labeled antibodies the radioimmunoscinigraphy and radioimmunotherapy studies and perspectives and directions for future research Tutorial as well as scientific lectures describing the latest research data on the above topics were presented Three workshop panels were convened on Methods for Determining Immunoreactivity of Radiolabeled Monoclonal Antibodies Problems and Pitfalls Radiobiological and Dosimetric Considerations for Immunotherapy with Labeled Antibodies and The Human Anti Mouse Antibody Response in Patients

Monoclonal Antibody Therapy of Human Cancer Kenneth A. Foon, Alton C. Morgan, 2012-12-06 KENNETH A FOON and ALTON C MORGAN JR Passive immunotherapy using heteroantisera for the treatment of cancer in animals and humans has been studied for over 50 years Attempts have been made to treat animal tumors with sera from immunized syngeneic allogeneic or xenogeneic animals A number of studies of passive immunotherapy using heterologous antisera in humans have also been performed These studies have generally been attempted in patients with large tumor burdens and as would be expected results have been transient at best A wide variety of solid tumors as well as leukemias and lymphomas have been treated with antisera raised in sheep horses rabbits and goats Problems such as anaphylaxis serum sickness and severe cytopenias have been encountered with these antisera There are a number of potential mechanisms by which unconjugated

antibodies might be cytotoxic to tumor cells Antibodies bound to the cell surface membrane of tumor cells may lead to cell lysis by complement dependent or antibody dependent cellular cytotoxicity Circulating tumor cells bound by antibody may be more susceptible to phagocytosis by the reticuloendothelial system Antibody bound to the cell surface membrane of tumor cells may enhance immunogenicity of the tumor cell leading to activation of the host's immune system

Nuclear Medicine Therapy Luca Giovanella, 2019-05-21 This book considers how Nuclear Medicine treatments have been further developed in the past several years and are now widely applied in clinical practice especially in oncological patients in addition to radioiodine therapy for various thyroid diseases These treatments are very effective when properly indicated but side effects and complications specifically related to the radioactive drugs and other potential clinical problems should also be considered since other treatments e.g. chemotherapy or radiotherapy are frequently administered before simultaneously with and/or after radionuclide therapies Consequently cumulative toxicities and treatment interactions must be considered and physicians prescribing treatments should be capable of preventing when possible and properly diagnosing and treating such side effects and complications Accordingly expertise in radionuclide therapy and extensive clinical expertise are required to appropriately manage critical cases This book provides essential information on the physiopathology and radiopharmacy of radionuclide treatments and addresses potential side effects and complications by providing a rapid consultation guide for clinicians synopses diagnostic flow charts and treatment schedules for a range of nuclear medicine treatments

Principles of Cancer Biotherapy Robert K. Oldham, Robert O.

Dillman,2009-08-29 At the time of the first edition of Principles of Cancer Biotherapy in 1987 this book represented the first comprehensive textbook on biological therapy In 1991 when the second edition was published there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches By 2003 and the fourth edition it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies Cancer biotherapy has now truly matured into the fourth modality of cancer treatment This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment This book summarizes an evolving science and a rapidly changing medical practice in biotherapy In this new millennium it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient s personalized cancer treatment This was first envisioned in the 1987 initial edition of this textbook and is now a new and popular approach to cancer treatment Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy akin to the use of insulin in the treatment of diabetes This textbook illustrates new methods of thinking and new strategies for control of cancer It is always difficult to move from past dogma to future opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy

Cell Adhesion and Communication Mediated by the CEA Family Clifford P Stanners,2003-09-02 Considers the recent explosion of knowledge about the carcinoembryonic antigen CEA family which resulted from the molecular cloning of family member genes in 1986 Results indicating CEA family members upregulated in cancer could have an instrumental role in malignant transformation and metastasis while those that are downregulated could have tumor suppressive functions are considered Reviews recent results hypotheses and clinical applications regarding a gene family that from its widespread changes in expression in tumors at many sites should be regarded as a major player in human cancer are also discussed The normal functions such as epithelial and hematopoietic adhesion and signalling molecules are explored and the possibly unique role of this family in evolution is introduced This volume will be of interest to researchers in the fields of intercellular adhesion evolution and molecular recognition as well as clinicians interested in the recent knowledge regarding a tumor marker commonly utilised in the clinic and companies wishing to exploit this cancer related family for novel commercial applications in the biomedical sphere
