and volunteers in biomedical research It addresses the proper application of the fundamental principles justification optimisation of protection and application of dose limits of the Commission s 2007 Recommendations to these individuals With regard to medical exposure of patients it is not appropriate to apply dose limits or dose constraints because such limits would often do more harm than good Often there are concurrent chronic severe or even life threatening medical conditions that are more critical than the radiation exposure The emphasis is then on justification of the medical procedures and on the optimisation of radiological protection In diagnostic and interventional procedures justification of procedures for a defined purpose and for an individual patient and management of the patient dose commensurate with the medical task are the appropriate mechanisms to avoid unnecessary or unproductive radiation exposure Equipment features that facilitate patient dose management and diagnostic reference levels derived at the appropriate national regional or local level are likely to be the most effective approaches In radiation therapy the avoidance of accidents is a predominant issue With regard to comforters and carers and volunteers in biomedical research dose constraints are appropriate Over the last decade the Commission has published a number of documents that provided detailed advice related to radiological protection and safety in the medical applications of ionising radiation Each of the publications addressed a specific topic defined by the type of radiation source and the medical discipline in which the source is applied and was written with the intent of communicating directly with the relevant medical practitioners and supporting medical staff This report consolidates that advice
