emphasis on cancer management in the past was based primarily on control rates from multidisciplinary input in management. The authors of this book have dealt very effectively with the various tumor types in head and neck cancer with the experts in the field of management. The contents range from epidemiology and treatment outcome treatment techniques with the potential impact on the quality of life such as dysphagia to the various options relative to high technology radiation therapy programs for management. The potential for improving form and function through surgical care as an integrated part of the program is dealt with very effectively as well as the potentials for chemotherapy and the use of targeted agents have on quality of life issues. The volume also addresses toxicity quality of life and techniques for prevention of adverse effects as well as the potentials for rehabilitation and supportive care.
