Applications     Distributed Services with OpenAFS Franco Milicchio, Wolfgang Alexander Gehrke, 2007-06-07 This book provides a concise answer to how one should organize a robust enterprise IT infrastructure based on open source software with mainstream hardware It is a necessity for large organizations to build a central user authentication service global user information storage and to offer common access to personal files regardless of the location the user wishes to connect from All these issues have been addressed with the help of well established technologies such as the industry standard Kerberos for user authentication and the OpenAFS distributed file system originally conceived at CMU and used at universities like MIT and Stanford and also at research institutions like CERN among many others Our presentation offers support for system architects and administrators to decide and implement an enterprise IT infrastructure and for advanced UNIX users wishing to look beyond isolated workstations to experience the move from local to global administration and the resulting challenges The presentation is a step by step guide accompanied with a detailed explanation

of the corresponding technical context that mirrors our own experience gained during the setup of an AFS cell at our computer science and engineering department The main focus lies on the application of UNIX based services with particular attention to the underlying OpenAFS file system therefore it can be seen as a companion to the excellent and currently only available book *Managing AFS The Andrew File System* by Richard Campbell which reflects the new state of today's implementation
