In *Ragnarok The Age of Fire and Gravel* Ignatius Donnelly presents a compelling exploration of the cataclysmic events that he posits shaped human civilization intertwining geology mythology and what he terms pole shifts. The book is characterized by its provocative prose and audacious hypotheses presenting a narrative that challenges the established scientific paradigms of the 19th century. Donnelly's literary style is both didactic and imaginative as he weaves together ancient myths particularly Norse myths of Ragnarok with contemporary scientific theories to propose a cyclical vision of history marked by disaster and rebirth. Donnelly a politician and polymath was deeply influenced by the intellectual currents of his time particularly the burgeoning fields of paleontology and geology. His background in literature and history combined with a fervent interest in the esoteric and the arcane led him to question the linearity of civilization's progress. His previous works already showcased a penchant for speculative thought and in *Ragnarok* he distills these ideas into a singular work that aims to reveal the true depths of human history's tumultuous nature. This book is highly recommended for readers interested in alternative histories geology and mythology as it challenges conventional narratives and encourages critical thinking about our past. Donnelly's unique blend of scholarship and imaginative storytelling invites readers to consider the catastrophic conditions that may have impacted humanity's development making it an essential read for anyone intrigued by the mysteries of civilization.

What do we dwell on The earth What part of the earth The latest formations of course We live upon the top of a mighty series of stratified rocks laid down in the water of ancient seas and lakes during incalculable ages said by geologists to be from ten to twenty miles in thickness Think of that Rock piled over rock from the primeval granite upward to a height four times greater than our highest mountains and every rock stratified like the leaves of a book and every leaf containing the records of an intensely interesting history illustrated with engravings in the shape of fossils of all forms of life from the primordial cell up to the bones of man and his implements But it is not with the pages of this sublime volume we have to deal in this book It is with a vastly different but equally wonderful formation Upon the top of the last of this series of stratified rocks we find THE DRIFT What is it Go out with me where yonder men are digging a well Let us observe the material they are casting out First they penetrate through a few inches or a foot or two of surface soil then they enter a vast deposit of sand gravel and clay It may be fifty one hundred five hundred eight hundred feet before they reach the stratified rocks on which this drift rests It covers whole continents It is our earth It makes the basis of our soils our railroads cut their way through it our carriages drive over it our cities are built upon it our crops are derived from it the water we drink percolates through it on it we live love marry raise children think dream
