Australia and south east Asia in the context of a specific issue For example rainforests in Papua New Guinea are examined in the context of community based ecotourism development while the rainforests in Borneo are discussed in an examination of wildlife issues Other issues covered in this manner include governance empowerment issues for rainforest peoples and climate change *Forest Talk* Melissa Koch,2019-01-01 Trees are essential They provide water shelter and food for millions of plant and animal species including humans They deliver proven health benefits and they capture and store carbon which combats climate change Yet trees are in trouble Forests are struggling to adapt to climate change and deforestation is a major threat Recently researchers and citizen scientists made the surprising revelation that trees communicate with each other through an underground system of soil fungi and other methods Complex social networks help trees survive and thrive by transferring resources to each other sending defense signals communicating with their kin and more Meet the tree scientists and learn more of their fascinating discoveries *In the Rain Forest Canopy* Sneed B. of useful information is highly selective and does not fully survey the enormous diversity of the forests The Story of Evolution in 25 Discoveries Donald R.
