

Spinal Cord Myotatic Reflex

1. Hammer taps tendon, stretching the sensory receptors in the extensor muscle of the leg.

3a. The motor neuron conducts the action potential to the synapses on the extensor muscle fibers of the leg, causing contraction.

3b. The flexor muscle of the leg relaxes as the activity of its motor neurons is inhibited.

2a. The sensory neuron excites the motor neuron in the spinal cord.

2b. The sensory neuron excites the spinal interneuron.

2c. Interneuron synapse inhibits the motor neuron to the flexor muscle of the leg.

4. The leg kicks.

Oxford Textbook of Neurorehabilitation Volker Dietz, Nick S. Ward, 2020-05-28 Neurorehabilitation is an expanding field with an increasing clinical impact due to an ageing population During the last 20 years neurorehabilitation has developed from a discipline with little scientific background separated from other medical centers to a medical entity largely based on the principles of evidenced based medicine with strong ties to basic research and clinical neurology Today neurorehabilitation is still a work in progress and treatment standards are not yet established for all aspects of the field There are very few books that address contemporary neurorehabilitation from this perspective This new edition of the Oxford Textbook of Neurorehabilitation provides an understanding of the theoretical underpinnings of the subject as well as a clear perspective on how and why to approach treatment decisions on an individualized basis The book has been thoroughly updated to reflect novel important developments in the field and includes new chapters on vocational rehabilitation self management strategies in neurorehabilitation and music supported therapy in neurorehabilitation This indispensable book will be of great interest to rehabilitation physicians neurologists and allied health care professionals who look after patients requiring neurorehabilitation

The Care and Management of Spinal Cord Injuries G. M. Bedbrook, 2013-06-29 Spinal paralysis is probably the most devastating of all the illnesses that can befall man Only a minority of Paraplegia He has made many significant contributions both in the initial treatment and within three years due to the complications and in the later rehabilitation of spinal cord lesions that frequently accompany the condition victims He is a man who truly cares about people Today the situation is quite different and 80% of people He is superbly organized meticulous in his care of spinal victims have a relatively normal life planning and energetic in his execution of expectancy The author of this book was one of the first to realize that if a paraplegic patient is from his staff As a result his Spinal Unit in Perth Australia is one of the best treatment centers and if all of the potential complications and rehabilitation centers in the world His are prevented that

individual can eventually knowledge from both the scientific and prac recover sufficient function to live a productive tical viewpoints is truly staggering a fact that and independent life This basic concept un is quite obvious from the details contained in derlies the modern approach to the treatment this book of spinal injuries Nelson Loose-leaf Medicine ,1920

Desmedt,1973-04-16 Plasticity of primary afferent neurons and sensory processing after spinal cord injury Alexander Rabchevsky,Jeffrey C. Petruska, Charles Hubscher,2015-01-05 Traumatic injury of the spinal cord affects the entire organism directly and indirectly Primary injury destroys neurons and severs axons which participate in neural circuits Secondary injuries and pathologies arise from numerous sources including systemic inflammation consequential damage of cutaneous muscular and visceral tissues and dysregulation of autonomic endocrine and sensory motor functions Evidence is mounting that spinal cord injury SCI affects regions of the nervous system spatially remote from the injury site as well as peripheral tissues and alters some basic characteristics of primary afferent cell biology and physiology cell number size frequency electrophysiology other The degree of afferent input and processing above the lesion is generally intact while that in the peri lesion area is highly variable though pathologies emerge in both regions including a variety of pain syndromes Primary afferent input to spinal regions below the injury and the processing of this information becomes even more important in the face of complete or partial loss of descending input because such spared sensory processing can lead to both adaptive and pathological outcomes This issue hosts review and research articles considering mechanisms of plasticity of primary afferent neurons and sensory processing after SCI and how such plasticity contributes to sparing and or recovery of functions as well as exacerbation of existing and or emergent pathologies A critical issue for the majority of the SCI community is chronic above peri and below level neuropathic pain much of which may arise at least in part from plasticity of afferent fibers and nociceptive circuitry For example autonomic dysreflexia is common hypertensive syndrome that often develops after SCI that is highly reliant on maladaptive nociceptive sensory input and processing below the lesion Moreover the loss of descending input leaves the reflexive components of bladder bowel sexual function uncoordinated and susceptible to a variety of effects through afferent fiber plasticity Finally proper afferent feedback is vital for the effectiveness of activity dependent rehabilitative therapies but aberrant nociceptive input may interfere with these approaches since they are often unchecked due to loss of descending modulation
