UML 2000 - The Unified Modeling Language: Advancing the Standard Andy Evans, Stuart Kent, Bran Selic, 2003-06-29 This book constitutes the refereed proceedings of the Third International Conference on the Unified Modeling Language 2000 held in York UK in October 2000 The 36 revised full papers presented together with two invited papers and three panel outlines were carefully reviewed and selected from 102 abstracts and 82 papers submitted The book offers topical sections on use cases enterprise applications applications roles OCL tools meta modeling behavioral modeling methodology actions and constraints patterns architecture and state charts

SDL 2005: Model Driven Andreas Prinz, Rick Reed, Jeanne Reed, 2005-06-09 This volume contains the papers presented at the 12th SDL Forum Grimstad Norway The SDL Forum was first held in 1982 and then every two years from 1985 Initially the Forum was concerned only with the Specification and Description Language that was first standardized in the 1976 Orange Book of the International Telecommunication Union ITU Since then many developments took place and the language has undergone several changes However the main underlying paradigm has survived and it is the reason for the success of the Specification and Description Language in many projects This paradigm is based on the following important principles of distributed applications Communication large systems tend to be described using smaller parts that communicate with each other State the systems are described on the basis of an explicit notion of state State change the behavior of the system is described in terms of local changes of the state The original language is not the only representative for this kind of paradigm so the scope of the SDL Forum was extended quite soon after the first few events to also include other ITU standardized languages of the same family such as MSC ASN.1 and TTCN This led to the current scope of System Design Languages covering all stages of the development process including in particular SDL MSC UML ASN.1 eODL TTCN and URN The focus is clearly on the advantages to users and how to get from these languages the same advantage given by the ITU Specification and Description Language code generation from high level specifications

SDL 2001: Meeting UML Rick Reed, Jeanne Reed, 2003-06-29 This volume contains the papers presented at the Tenth SDL Forum Copenhagen SDL is the Specification and Description Language first standardized by the world telecommunications body the International Telecommunications Union ITU more than 20 years ago in 1976 While the original language and domain of application has evolved significantly the foundations of SDL as a graphical state transition and process communication language for real time systems have remained Today SDL has also grown to be one notation in the set of unified modelling languages recommended by the ITU ASN.1 MSC

SDL ODL and TTCN that can be used in methodology taking engineering of systems from requirements capture through to testing and operation The SDL Forum is held every two years and has become the most important event in the calendar for anyone involved in SDL and related languages and technology The SDL Forum Society that runs the Forum is a non profit organization whose aim it is to promote and develop these languages

SDL 2017: Model-Driven Engineering for Future Internet Tibor Csöndes, Gábor Kovács, György Réthy, 2017-09-25 This book constitutes the proceedings of the 18th International System Design Language Forum SDL 2017 held in Budapest Hungary in October 2017 The 10 full papers presented in this volume were carefully reviewed and selected from 17 submissions The selected papers cover a wide spectrum of topics related to system design languages ranging from the system design language usage to UML and GRL models model driven engineering of database queries network service design and regression testing and modeling for Internet of Things IoT data processing

System on Chip Design Languages Anne Mignotte, Eugenio Villar, Lynn Horobin, 2013-04-17 This book is the third in a series of books collecting the best papers from the three main regional conferences on electronic system design languages HDLCon in the United States APCHDL in Asia Pacific and FDL in Europe Being APCHDL bi annual this book presents a selection of papers from HDLCon OI and FDL OI HDLCon is the premier HDL event in the United States It originated in 1999 from the merging of the International Verilog Conference and the Spring VHDL Users Forum The scope of the conference expanded from specialized languages such as VHDL and Verilog to general purpose languages such as C and Java In 2001 it was held in February in Santa Clara CA Presentations from design engineers are technical in nature reflecting real life experiences in using HDLs EDA vendors presentations show what is available and what is planned for design tools that utilize HDLs such as simulation and synthesis tools The Forum on Design Languages FDL is the European forum to exchange experiences and learn of new trends in the application of languages and the associated design methods and tools to design complex electronic systems FDL OI was held in Lyon France around seven interrelated workshops Hardware Description Languages Analog and Mixed signal Specification C C HW SW Specification and Design Design Environments Languages Real Time specification for embedded Systems Architecture Modeling and Reuse and System Specification Design Languages

Protocol Engineering Hartmut König, 2012-10-09 Communication protocols form the operational basis of computer networks and telecommunication systems They are behavior conventions that describe how communication systems interact with each other defining the temporal order of the interactions and the formats of the data units exchanged essentially they determine the efficiency and reliability of computer networks Protocol Engineering is an important discipline covering the design validation and implementation of communication protocols Part I of this book is devoted to the fundamentals of communication protocols describing their working principles and implicitly also those of computer networks The author introduces the concepts of service protocol layer and layered architecture and introduces the main elements required in the description of protocols using a model language He then presents the most

important protocol functions Part II deals with the description of communication protocols offering an overview of the various formal methods the essence of Protocol Engineering The author introduces the fundamental description methods such as finite state machines Petri nets process calculi and temporal logics that are in part used as semantic models for formal description techniques He then introduces one representative technique for each of the main description approaches among others SDL and LOTOS and surveys the use of UML for describing protocols Part III covers the protocol life cycle and the most important development stages presenting the reader with approaches for systematic protocol design with various verification methods with the main implementation techniques and with strategies for their testing in particular with conformance and interoperability tests and the test description language TTCN The author uses the simple data transfer example protocol XDT eXample Data Transfer throughout the book as a reference protocol to exemplify the various description techniques and to demonstrate important validation and implementation approaches The book is an introduction to communication protocols and their development for undergraduate and graduate students of computer science and communication technology and it is also a suitable reference for engineers and programmers Most chapters contain exercises and the author's accompanying website provides further online material including a complete formal description of the XDT protocol and an animated simulation visualizing its behavior

SDL 2003: System Design Rick Reed, Jeanne Reed, 2003-06-26 This book constitutes the refereed proceedings of the 11th International SDL Forum SDL 2003 held in Stuttgart Germany in July 2003 The 23 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections on performance evolution development modeling timing validation design and application Thus all aspects of systems design and system design languages are addressed

Performance Engineering Reiner Dumke, Claus Rautenstrauch, Andreas Schmietendorf, Andre Scholz, 2003-06-29 Initially computer systems performance analyses were carried out primarily because of limited resources Due to ever increasing functional complexity of computational systems and user requirements performance engineering continues to play a major role in software development This book assesses the state of the art in performance engineering Besides revised chapters drawn from two workshops on performance engineering held in 2000 additional chapters were solicited in order to provide complete coverage of all relevant aspects The first part is devoted to the relation between software engineering and

performance engineering the second part focuses on the use of models measures and tools finally case studies with regard to concrete technologies are presented Researchers professional software engineers and advanced students interested in performance analysis will find this book an indispensable source of information and reference
