

The search for extraterrestrial life—and the future of life on Earth

ARNOLD WOLFENDALE

Introduction

One of the great questions for humanity is "Are we alone?" The question is not a new one, of course, but has taken on the form since the last year or two. For it is now one of possession. First, radio astronomy has achieved such high sensitivities that we look for signs of life from the distances of other stars. We seek all "intelligent" radio signals, in passing practice. Second, recently, several claims for the detection of great (and possibly "life") on Mars have raised the possibility of the actual formation of "voluntary" life being very common. Finally, the observations of "dark-ening" comets and asteroids has pointed out the threat to life on Earth from the impacts of these bodies. Another impact on other (possible) life-bearing planets is one of the factors which must be considered when estimating how many "civilizations" there are likely to be in the Galaxy.

Historical attitudes

There have, commonly held opinions, that "intelligent life" is quite common in the Galaxy (at least a few). From many traditions, even the quietest part from by the Greek Philosophers, Lucretius and by the Chinese Philosophers, Tsing Shi.

Cosmic Quips and Scientific Surprises Pasquale De Marco,2025-07-23 Cosmic Quips and Scientific Surprises Exploring the Mysteries of Science Nature and Technology is a collection of essays that delve into some

of the most fascinating and thought provoking topics in science nature and technology In this book you will explore the wonders of the cosmos from the Big Bang to the search for extraterrestrial life You will investigate the laws of motion and the properties of matter and learn about the amazing diversity of life on Earth You will also explore the mysteries of the human mind the history of science and the future of technology This book is not intended to be a comprehensive survey of all scientific knowledge Rather it is a collection of essays that are designed to spark your curiosity and inspire you to learn more about the world around you Whether you are a seasoned scientist or a curious layperson you will find something to enjoy in these pages One of the things that makes science so fascinating is its ability to change our understanding of the world Just a few centuries ago people believed that the Earth was the center of the universe and that the sun revolved around it Today we know that the Earth is just one of many planets that orbit the sun and that our solar system is just one of billions in the Milky Way galaxy The history of science is full of stories of scientists who challenged the prevailing wisdom of their time and made groundbreaking discoveries Galileo Galilei for example was one of the first scientists to use a telescope to study the heavens His observations led him to conclude that the Earth revolves around the sun not the other way around This was a radical idea at the time and Galileo was persecuted for his beliefs However his work eventually helped to lay the foundation for modern astronomy The process of scientific discovery is not always easy Scientists often have to overcome obstacles such as skepticism prejudice and even outright hostility But when a scientist makes a breakthrough it can have a profound impact on our understanding of the world Science has given us so much It has helped us to understand the universe to cure diseases and to develop new technologies that have made our lives easier and more enjoyable But science is not just about knowledge and technology It is also about a way of thinking Science teaches us to be skeptical to question the world around us and to always be open to new ideas We hope that this book will inspire you to learn more about the world around you and to appreciate the wonders of science If you like this book write a review *Globalistics and Globalization Studies* George

Panov,2015-01-01 This yearbook is the fourth in the series with the title *Globalistics and Globalization Studies* The subtitle of the present volume is *Global History Big History* The point is that today our global world really demands global knowledge Thus there are a few actively developing multidisciplinary approaches and integral disciplines among which one can name *Global Studies Global History and Big History* They all provide a connection between the past present and future *Big History* with its vast and extremely heterogeneous field of research encompasses all the forms of existence and all timescales and brings together constantly updated information from the scientific disciplines and the humanities *Global History* is

transnational or world history which examines history from a global perspective making a wide use of comparative history and of the history of multiple cultures and nations Global Studies express the view of systemic and epistemological unity of global processes Thus one may argue that Global Studies and Globalistics can well be combined with Global History and Big History and such a multi disciplinary approach can open wide horizons for the modern university education as it helps to form a global view of various processes *New Worlds: Colonizing Planets, Moons and Beyond* Dan Răzvan

Popoviciu,2023-03-31 Terraforming is the process of modifying a planet moon or other body to a more habitable atmosphere temperature or ecology The idea of terraforming or colonizing other planets has recently become a topic of intense scientific interest and public debate Geoengineering and terraforming at their core have the same goal to enhance or revive the ability of a specific environment to support human life society and industry *New Worlds Colonizing Planets Moons and Beyond* examines extraterrestrial colonization plans with a critical eye The ten chapters of the book provide a detailed review of the demographic and economic reasons behind this space imperative technical and ecological solutions to improve the settlement of our own planet enhancements of our current space industry The book also covers interesting topics such as the terraformation of Mars the moon and other planets like Venus colonizing the outer solar system and beyond and the ethical considerations in favor of space expansion This simple yet informative treatise is an essential read for anyone interested in the subject of space colonization [Current Contents](#) ,1999 **The Impact of Discovering Life beyond Earth** Steven J.

Dick,2015-10-26 The search for life in the Universe once the domain of science fiction is now a robust research program with a well defined roadmap from studying the extremes of life on Earth to exploring the possible niches for life in the Solar System and discovering thousands of planets far beyond it In addition to constituting a major scientific endeavor astrobiology is one of the most popular topics in astronomy and is of growing interest to a broad community of thinkers from across the academic spectrum In this volume distinguished philosophers theologians anthropologists historians and scientists discuss the big questions about how the discovery of extraterrestrial life whether intelligent or microbial would impact society Their remarkable and often surprising findings challenge our foundational concepts of what the discovery of alien life may hold for humankind Written in easily accessible language this thought provoking collection engages a wide audience of readers from all backgrounds

Earth Sciences History ,2000 **Writing Our Extinction** Patrick Whitmarsh,2023-04-11 Mid twentieth century developments in science and technology produced new understandings and images of the planet that circulated the globe giving rise to a modern ecological consciousness but they also contributed to accelerating crises in the global environment including climate change pollution and waste In this new work Patrick Whitmarsh analyzes postwar narrative fictions that describe depict or express the earth from above the aerial and below the subterranean revealing the ways that literature has engaged this history of vertical science and linked it to increasing environmental precarity up to and including the extinction of humankind Whitmarsh examines works by writers such as Don DeLillo Karen Tei Yamashita Reza

Negarestani and Colson Whitehead alongside postwar scientific programs including the Space Race atmospheric and underground nuclear testing and geological expeditions such as Project Mohole which attempted to drill to the earth's mantle As Whitmarsh argues by focusing readers attention on the fragility of postwar life through a vertical lens Anthropocene fiction highlights the interconnections between human behavior and planetary change These fictions situate industrial history within the much longer narrative of geological time and reframe scientific progress as a story through which humankind writes itself out of existence
