

Do birds come from dinosaurs?

Evolution of birds is a debate topic in science. The most widespread theory says that they come from the Theropods, dinosaurs that walked on two legs. Fossils of specimens with feathers have been found, and the Archaeopteryx, which lived 150 millions of years ago is the oldest relative known. Covered with feathers, it had a primitive wing and it is believed it flew. However, it kept a good amount of dinosaur-like features.

STRANGE BIRD

The Archaeopteryx lithographica is the most primitive bird known. It lived in the Jurassic, 150 years ago. It was carnivorous and about 15 cm of height, and 30 long, similar to a crow. Its features make it the closest model to observe the transition between dinosaurs and birds.

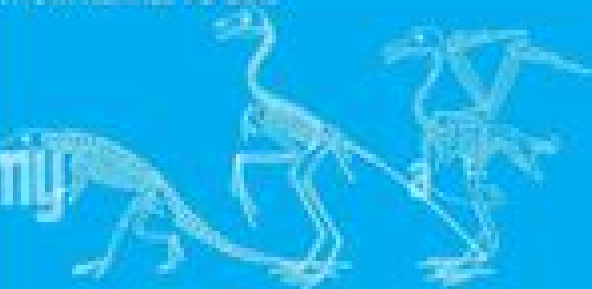

OTHER THEORIES

A second theory says that birds came from the first cynodonts, which were small mammals with claws. The third and last one claims that they came from the first amphibians, along with the first reptiles and the first dinosaurs.

CHARACTERISTICS OF BIRDS
The first group is the most recent, like the modern ones, and it had a set of very strong teeth in both jaws.

TEETH
Presence of teeth in the baby, transitional, typical in reptiles and dinosaurs.

FROM REPTILE TO BIRD

1 THEROPOD REPTILE
From the Triassic period

2 ARCHAEOPTERYX
From the Jurassic period

3 BIRD
From the Cretaceous period

FOSSIL EVIDENCE
The Archaeopteryx has the characteristic dinosaurian wing, while it is covered with the feathers and the membrane are present.

FOSSIL
The first is traditionally kept in the Berlin Museum, but it is not on the ground and it is supposed that it is a specimen that is a bird.

THE FOSSIL

There are several fossil specimens found between 1868 and 1910. The first was found in Bavaria, Germany, and very important because it was of the same time of the publication of "The Origin of Species" by Charles Darwin. In a case in which the search for "missing links" is evolution-based.

Greenberg, E. Tobach, 2014-05-22 First published in 1984 In this collection of essays Schneirla is identified as a scientist and citizen unafraid to hold and present unpopular ideas Schneirla had always been opposed to the hereditarian views that allowed for the politicalization of psychology and spoke out early against the idea of the genetic basis of behavior It is fitting that his ideas which still form the nexus of the major theoretical criticism of classical ethology now can be seen to stand in opposition to the hereditarian views of socio biology *Proceedings of the Geologists' Association* Geologists' Association, 1889 *In Search of Deep Time* Henry Gee, 2000-12 Cladistics the science of comparison is transforming the way paleontologists view evolution In Search of Deep Time strips away conventional assumptions about the evolution of life to reveal a world that may be far stranger and more humbling than had been previously imagined The concept of deep time was first used by John McPhee to describe intervals of time incomprehensibly greater than our daily experience Henry Gee explains the rise of cladistics as the best technique for making sense of the organic changes that unfold within deep time **Science Discovers God** Ariel Adrean Roth, 2008 Does God exist Did a Master Designer create our universe or did life spontaneously evolve Can science retain objectivity in the search for truth while allowing for the possibility that God exists Does it make any difference Ariel A Roth scientist and Christian believer examines key issues related to the God question the intricate organization of matter in the universe the precision of the forces of physics the complexity of the eye and the brain the elaborate genetic code the disparity between the fossil record and the vast amount of time necessary for evolution Faced with so much evidence that seems to require a God in order to explain what we find in nature why does the scientific community remain silent about God Hypotheses and speculations that attempt to fit data into a predetermined conclusion abound What overriding influence prevents scientists from following the data of nature wherever it may lead **In Search of the Causes of Evolution** Peter R.
