Frost, 2022-02-03 The history of true crime in Britain is a long and as we shall see often stranger than fiction tale The book that follows offers an eclectic stew of strange and perplexing British true crime cases These cases are all disconcertingly odd and in many instances downright bizarre We have the murder of an elderly farmer brutally killed with a pitchfork in what may or may not have been a case involving witchcraft Then there is a shocking train murder which took place in a closed carriage in broad daylight during an afternoon commuter run to London We also have the baffling case of a retired spinster who was gruesomely killed for no apparent reason in her own home on Halloween night We shall also be examining the modern legend of the alleged maniac said to randomly push his victims into Manchester's murky canals Then we'll take a look at the monstrous Victorian terror known as Spring Heeled Jack We shall stop too to consider the unsolved murder of a young man in Sussex who was found dissected inside two abandoned suitcases We shall also explore the high profile killing of Jill Dando a case which surely ranks as one of the most shocking and baffling celebrity deaths ever to occur in Britain As if that wasn't enough we also have grave robbers cannibals the Brighton trunk murders a woman who staged a crackpot hoax abduction of her own daughter a gruesome murderer who operated at the same time as Jack the Ripper and had the macabre signature of leaving torsos and body parts scattered around London and a suave post war con artist who in reality was a depraved sexual serial killer So draw the curtains turn off the lights make sure the doors are locked and settle down to explore some of the strangest true crime cases Blighty has to offer

Golomb, Robert E. Peile, Robert A. Scholtz, 2013-03-09 Basic Concepts in Information Theory and Coding is an outgrowth of a one semester introductory course that has been taught at the University of Southern California since the mid 1960s Lecture notes from that course have evolved in response to student reaction new technological and theoretical developments and the insights of faculty members who have taught the course including the three of us In presenting this material we have made

it accessible to a broad audience by limiting prerequisites to basic calculus and the elementary concepts of discrete probability theory To keep the material suitable for a one semester course we have limited its scope to discrete information theory and a general discussion of coding theory without detailed treatment of algorithms for encoding and decoding for various specific code classes Readers will find that this book offers an unusually thorough treatment of noiseless self synchronizing codes as well as the advantage of problem sections that have been honed by reactions and interactions of several generations of bright students while Agent 00111 provides a context for the discussion of abstract concepts
