Low Temperature Preservation in Medicine and Biology M. J. Ashwood-Smith, J. Farrant, 1980 *Cryopreservation and low temperature biology in blood transfusion* C.Th. Smit Sibinga, P.C. Das, H.T. Meryman, 2012-12-06 The theme of this 14th International Symposium on Blood Transfusion is closely related to the work and scientific contributions of the Dutch cryobiology pioneer Dr Herman W Krijnen of the Dutch Red Cross Central Laboratory Dr Krijnen was known and respected in the national and international blood transfusion community as an extremely competent scientist and a beloved and admired colleague Dr Krijnen was intentionally honoured with the invitation to open this symposium on cryopreservation and low temperature biology in blood transfusion and be the guest of honour at this event Unfortunately Dr Krijnen suddenly died on the first of June 1989 In honour and memory of Dr Krijnen this symposium will therefore be dedicated to him Since the 10th International Symposium on Blood Transfusion in 1985 highlighted the theme of Future developments in blood banking major changes have occurred in the blood banking world Most of these changes were forced upon the Blood Banks by the fear of spreading AIDS through contaminated donations This not only led to the wide spread testing of blood but also to a more appropriate counselling of the community and the blood donors in specific Additionally virus inactivation techniques were introduced for those components derived from multiple donations and intended for a regular transfusion in haemophiliacs patients and others

Biosafety in Industrial Biotechnology P. Hambleton,T. Salusbury,1994-09-30 As an industry biotechnology may be likened to the Hymn Book being both ancient and modern Whereas activities such as baking brewing the fermenting of foods date from our earliest attempts to control and utilise the environment the application of recombinant DNA technology is recognised as being at the forefront of novel industrial development Perhaps because of its association with processing foodstuffs together with the benefits derived from applications in the early organic chemistry and pharmaceutical industries biotechnology has been regarded as being inherently safe Yet unlike other modern industries such as chemical and nuclear where regulation has followed from incidents or accidents modern biotechnology has been subject to close scrutiny and regulation almost from its inception The process of regulation itself is somewhat unusual in that it was initially self imposed by the very scientists who developed the fundamental techniques of recombinant DNA technology They recognised the significance of their development but were concerned of the effects on humans and the environment of uncontrolled application of the new powerful technology Concern about the possible consequences of genetic manipulation has undoubtedly been the driving force behind the regulations that are now in place in many parts of the world and which are the subject of this book Safety issues in the biotechnology industry can be categorised under three headings worker environmental and consumer product safety
