Rethinking Scientific Change and Theory Comparison: Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29

L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability. It represents the most recent thinking on the topic of incommensurability and scientific theory change. It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other. And it discusses some central epistemological consequences regarding the nature of scientific progress, rationality, and realism. With respect to these topics, it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists. The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques: stabilité, ruptures, incommensurabilités* organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy, France, in June 2004. Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments. The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science, historians of science, and scientists who come from different traditions and endorse opposing commitments. I hope that this is evident in the book too and that it will constitute one of its attractions.

Monstrous Crimes and the Failure of Forensic Psychiatry John Douard, Pamela D. Schultz, 2012-11-13 The metaphor of the monster or predator usually a sexual predator drug dealer in areas frequented by children or psychopathic murderer is a powerful framing device in public discourse about how the criminal justice system should respond to serious violent crimes The cultural history of the monster reveals significant features of the metaphor that raise questions about the extent to which justice can be achieved in both the punishment of what are regarded as monstrous crimes and the treatment of those who commit such crimes This book is the first to address the connections between the history of the monster metaphor the 19th century idea of the criminal as monster and the 20th century conception of the psychopath the new monster The book addresses in particular the ways in which the metaphor is used to scapegoat certain categories of crimes and criminals for anxieties about our own potential for deviant and indeed dangerous interests These interests have long been found to be associated with the fascination people have for monsters in most cultures including the West The book outlines an alternative public health approach to sex offending and crime in general that can incorporate what we know about illness prevention while protecting the rights and humanity of offenders The book concludes with an analysis of the role of forensic psychiatrists and psychologists in representing criminal defendants as psychopaths or persons with certain personality disorders As psychiatry and psychology have transformed bad behavior into mad behavior these institutions have taken on the legal role of helping to sort out the most dangerous among us for preventive treatment rather than carceral punishment

Theory Construction in Second Language Acquisition Geoff Jordan, 2004-02-04 Recently many SLA researchers have adopted a postmodernist approach which challenges the assumption that SLA research is a rationalist scientific endeavour The resulting epistemological arguments plus problems of theory proliferation contradicting theories and theory domain hinder progress towards a unified theory of SLA Theory Construction in SLA addresses these problems by returning to first principles it asks whether there is such a thing as reliable knowledge what is special about scientific method and how we can best explain SLA It is the first book to use the philosophy of science in order to examine the epistemological underpinnings of SLA research and evaluate rival theories of SLA Part One explores the central issues in the philosophy of science defends rationality against relativists and offers Guidelines for theory assessment Part Two examines different theories of SLA and evaluates them in terms of how well they stand up to the Guidelines

Genomics and Democracy Peter Derkx, Harry Kunneman, 2013-09-01 This book addresses the ethical and political questions flowing from the vastly increased possibilities to manipulate the genetic properties of organisms including

human beings Due to the great complexity of the scientific fields involved these questions are framed and answered mostly by scientific experts But the new technological possibilities and social practices connected with genetic manipulation intrude into domains that for a long time have been the provenance of religious and secular worldviews and touch upon deep seated convictions and emotions Moreover they are strongly influenced by economic and political interests As a consequence questions of scientific truth and technical control are getting more and more mixed up with questions regarding values and interests Against this background this book starts from the premise that neither clinging to the idea of value neutral disinterested science nor the complete abandonment of this idea in favour of postmodern relativism will be of much help here Instead the different contributions to this book explore the idea of a lingua democratica for the life sciences and sketch the contours of this notion by focusing on a broad range of conceptual and practical issues in the field of genomics **Built to**

Fail Robert K. Irvine,Randy K. Trani,2014-04-10 This book argues that American schools are marked by fundamental structural deficiencies that get in the way of student achievement The structural deficiencies are pervasive They include the emphasis on grade level building large schools and districts and insistence on building comprehensive high schools These structural deficiencies negatively impact achievement for all kids but they are particularly detrimental to at risk populations In fact at risk populations are negatively impacted to such a disproportionate degree that to continue to maintain these structural deficiencies borders on racism at the worst or pure negligence at the least After identifying the structural problems the authors consider what the best schools in the U S and other countries do to promote excellence Based on what works the authors offer suggestions for fixing the broken structure and promoting educational excellence The book ends with a self diagnostic tool to help schools and districts identify their structural deficiencies and prioritize an action plan for eliminating those deficiencies **The Incentivised University** Seán Mfundza Muller,2022-01-24 The core thesis of this

book is that to understand the implications of incentive structures in modern higher education we require a deeper understanding of associated issues in the philosophy of science Significant public and philanthropic resources are directed towards various forms of research in the hope of addressing key societal problems That view and the associated allocation of resources relies on the assumption that academic research will tend towards finding truth or at least selecting the best approximations of it The present book builds on and extends contributions in philosophy and higher education to argue that this assumption is misplaced with serious implications for modern higher education and its role in informing societal decisions and government policy The book develops a philosophical foundation for the analysis of the connection between higher education incentives scientific progress and societal outcomes That in turn is used to demonstrate how the current approach to incentivising intellectual and scientific progress is likely not only to fail but in fact to cause harm on the very dimensions it purports to improve The arguments presented are illustrated with examples from medicine and academic economics making the book one of the first to examine issues of scientific progress and social consequences across the

human and social sciences In doing so it develops a novel critique of modern economics that in turn provides a more philosophically substantive foundation for popular critiques of economics than has existed to date **Edinburgh**

understanding of the cosmos and the implications for entities such as human beings This entails the observation and explanation of human and cosmic evolution as viewed in unity or inter connectedness where macro and micro are essentially interlinked Laszlo s philosophical work extends to sociology when describing concurrent worldwide issues closely related to the existence of the Akashic Field His humanist ideals are evidenced by his efforts to help humans understand the context and causes for their recent challenges and the possibilities that may lie ahead Ervin Laszlo s half century of exceptional philosophical work gives us the most coherent picture of the nature of the world to date New Trends in Development Theory Peter Preston,2010-11-26 The theme of this work first published in 1985 is the exchange between issues of development and problems of social theory They provide preliminary analysis of the multiplicity of social theoretic arguments in development theory and their implications for social theory in general The book will be of interest to all those interested in the contemporary restructuring of social theory and to theorists of development who are rethinking their concerns in a period of pessimism and doubt
