The Realism-Antirealism Debate in the Age of Alternative Logics Shahid Rahman, Giuseppe Primiero, Mathieu Marion, 2011-09-22 The relation between logic and knowledge has been at the heart of a lively debate since the 1960s On the one hand the epistemic approaches based their formal arguments in the mathematics of Brouwer and intuitionistic logic Following Michael Dummett they started to call themselves antirealists Others persisted with the formal background of the Frege Tarski tradition where Cantorian set theory is linked via model theory to classical logic Jaakko Hintikka tried to unify both traditions by means of what is now known as explicit epistemic logic Under this view epistemic contents are introduced into the object language as operators yielding propositions from propositions rather than as metalogical constraints on the notion of inference The Realism Antirealism debate has thus had three players classical logicians intuitionists and explicit epistemic logicians The editors of the present volume believe that in the age of Alternative Logics where manifold developments in logic happen at a breathtaking pace this debate should be revisited Contributors to this volume happily took

on this challenge and responded with new approaches to the debate from both the explicit and the implicit epistemic point of view Jaakko Hintikka on Knowledge and Game-Theoretical Semantics Hans van Ditmarsch, Gabriel Sandu, 2018-01-31

Modalities Tero Tulenheimo, 2017-03-14 This book develops a novel generalization of possible world semantics called world line semantics which recognizes worlds and links between world bound objects world lines as mutually independent aspects of modal semantics Addressing a wide range of questions vital for contemporary debates in logic and philosophy of language and offering new tools for theoretical linguistics and knowledge representation the book proposes a radically new paradigm in modal semantics This framework is motivated philosophically viewing a structure of world lines as a precondition of modal talk The author provides a uniform analysis of quantification over individuals physical objects and objects of thought intentional objects The semantic account of what it means to speak of intentional objects throws new light on accounts of intentionality and singular thought in the philosophy of mind and offers novel insights into the semantics of intensional transitive verbs Analyses of Aristotle Jaakko Hintikka, 2006-04-11 Aristotle thought of his logic and methodology as

applications of the Socratic questioning method In particular logic was originally a study of answers necessitated by earlier answers For Aristotle thought experiments were real experiments in the sense that by realizing forms in one's mind one can read off their properties and interrelations Treating forms as independent entities knowable one by one committed Aristotle to his mode of syllogistic explanation He did not think of existence predication and identity as separate senses of *estin* Aristotle thus serves as an example of a thinker who did not rely on the distinction between the allegedly different Fregean

senses thereby shedding new light on our own conceptual presuppositions This collection comprises several striking interpretations that Jaakko Hintikka has put forward over the years constituting a challenge not only to Aristotelian scholars and historians of ideas but to everyone interested in logic epistemology or metaphysics and in their history

Inquiry as Inquiry: A Logic of Scientific Discovery Jaakko Hintikka, 2013-04-17 Is a genuine logic of scientific discovery possible In the essays collected here Hintikka not only defends an affirmative answer he also outlines such a logic It is the logic of questions and answers

Thus inquiry in the sense of knowledge seeking becomes inquiry in the sense of interrogation Using this new logic Hintikka establishes a result that will undoubtedly be considered the fundamental theorem of all epistemology viz the virtual identity of optimal strategies of pure discovery with optimal deductive strategies Questions to Nature of course must include observations and experiments Hintikka shows in fact how the logic of experimental inquiry can be understood from the interrogative vantage point Other important topics examined include induction in a forgotten sense that has nevertheless played a role in science explanation the incommensurability of theories theory ladenness of observations and identifiability

Transformational-Generative Paradigm and Modern Linguistic Theory E. F. K. Koerner, 1975-01-01 This volume reflects the fact that the possibilities in theory construction allow for a much wider spectrum than students of linguistics have perhaps been led to believe It consists of articles by scholars of differing generations and widely varying academic persuasions some have received their initiation to the trade within the framework of transformational generative grammar some in one or the other structuralist mould yet others in the philology and linguistics of particular languages and language families They all share however some doubts concerning characteristic attitudes and procedures of present day mainstream linguistics All want not a uniformity of ideological stance but a union of individualists working towards the advancement of theory and empirical accountability **Functions and Uses of Disciplinary Histories** Loren Graham, Wolf Lepenies, P.

Weingart, 2012-12-06 Edward Gibbon's allegation at the beginning of his Essay on the Study of Literature 1764 that the history of empires is that of the miseries of humankind whereas the history of the sciences is that of their splendour and happiness has for a long time been accepted by professional scientists and by historians of science alike For its practitioner the history of a discipline displayed above all the always difficult but finally rewarding approach to a truth which was incorporated in the discipline in its actual form Looking back it was only too easy to distinguish those who erred and heretics in the field from the few forerunners of true science On the one hand the traditional history of science was told as a story of hero and hero worship on the other hand it was paradoxically enough the constant attempt to remind the scientist whom he should better forget It is not surprising at all therefore that the traditional history of science was a field of only minor interest for the practitioner of a distinct scientific discipline or specialty and at the same time a hardly challenging task for the professional historian Nietzsche had already described the historian of science as someone who arrives late after harvest time it is somebody who is only a tolerated guest at the thanksgiving dinner of the scientific community
