Recent Concepts In Orl:

Recent Developments in Alcoholism Marc Galanter, 1989-01-31 From the President of the Research Society on Alcoholism In the last decade research concerning the causes and consequences of alcohol abuse and alcoholism has come of age We have witnessed a plethora of scientific findings that have shed light on some of the actions of alcohol at the molecular level Interesting new data have been forthcoming on the complexities of the development of tolerance to alcohol It is becoming increasingly appropriate to consider that tolerance to alcohol involves biological as well as psychological factors New scientific insights have been gained concerning the treatment of withdrawal as well as the presence of persistent withdrawal signs that may possibly be involved with relapse More recently new and compelling data indicating that alcoholism is a common familial disorder have appeared Clinical studies indicate that alcoholism is a heterogeneous disorder with multiformity in clinical symptomatology and genetic heterogeneity The heterogeneity of the clinical features and the heritability of the predisposing factors of alcoholism are currently under vigorous scientific investigation In the past several years sophisticated psychosocial studies have provided fundamental information on subjects at high risk for alcoholism Psychosocial and biological studies of families including alcoholics and subjects at high risk are likely to bring new insights to our understanding of etiological factors Moreover as a result of these studies we stand to develop better prevention initiatives and treatment approaches

Current Trends in Connectionism Lars F. Niklasson, Mikael B. Bodén, 2013-07-04 In order to build intelligent machines many researchers have turned to the only naturally occurring intelligent system the brain For quite a while now both the function and architecture of the brain have served as inspiration to philosophers psychologists computer scientists neurobiologists physicists and others in their quest for solving problems that seem to require intelligence in their own particular domain The progress in the field of connectionism or artificial neural networks has had its ups and downs during its maturing years Advocates of the field pointed out the virtues of connectionist systems dealing with low level cognitive tasks such as visual recognition and pattern completion and inherent properties such as generalization fault tolerance and parallel processing However research in the field virtually came to a halt at the end of the 1960s when Minsky and Papert published their critical analysis of connectionist systems Perceptrons In the beginning of the 1980s the field was reborn with the appearance of new powerful learning methods which overcame many of the computational problems identified by Minsky and Papert This volume is characterized by a number of different research directions distinguished by their perspectives on systems comprising interconnected sets of simple processing elements Scientists who have strong backgrounds in neurobiology concentrate on the issues involved when modelling natural systems Researchers with philosophical and psychological backgrounds stress other aspects which might not always be intuitively relevant to biology but instead are concerned with the mind and its higher order cognitive capabilities On the other hand many researchers and engineers in industry take advantage of the wide applicability and mathematical properties of connectionist systems in order

to solve practical problems sacrificing even more of the principles underlying the basic idea of mimicking the function and architecture of the brain None of these directions are right or wrong but there has perhaps been too little exchange of knowledge and experience between them The main purpose for organizing this conference was to bring together researchers with different backgrounds to exchange ideas and visions in the broad field of connectionism providing means for new insights that may push this area to another major breakthrough

New Concepts and Methods in Air Traffic

Management Lucio Bianco, Paolo Dell'Olmo, Amedeo R. Odoni, 2013-03-09 This volume is a compendium of papers presented during the International Workshop on Air Traffic Management which took place in Capri Italy on September 26-30 1999 The workshop was organized by Italian National Research Council in co operation with the University of Rome Tor Vergata and the Massachusetts Institute of Technology MIT This was the fifth in a series of meetings held periodically over a ten year span for the purpose of encouraging an exchange of views and findings by scientists in the field of Air Traffic Management ATM The papers presented at the workshop dealt with a wide range of topics and covered different aspects that are currently important in Air Traffic Control and Air Traffic Management This volume contains only a subset of the papers presented namely the ones that addressed the main area emphasis in the workshop new concepts and methods The subject of the first two papers is Collaborative Decision Making CDM a concept which embodies to a large extent the new philosophy of partial decentralization and increased delegation of responsibilities to users in ATM operations In the first of these papers Wambsganss describes the original CDM project and its initial implementation in the form of the Ground Delay Program Enhancements He also provides a brief description of some of the tools that have been developed as part of the CDM effort and identifies future research and development requirements

Baer, 2020-09-10 Originally published in 1977 these examples of research and scholarly argument were collected in honor of Professor Sidney W Bijou In the language of academics they constitute a *Festschrift* a festival of scholarly writing performed to celebrate the career of a person who produced and stimulated others to produce exactly such contributions throughout a long valuable and productive professional history Since 1955 Dr Bijou had worked almost exclusively within the approach variously labelled as the functional analysis of behavior the experimental analysis of behavior operant conditioning or Skinnerian psychology From his point of view it seems clear the first of these labels was the correct one It was the principle of objective direct observable analysis that attracted him

Recent Advances in $\gamma\delta$ T Cell Biology: New Ligands, New Functions, and New Translational Perspectives Dieter Kabelitz, Julie Dechanet-Merville, 2016-02-16

Gamma delta T cells are a small subset of T lymphocytes in the peripheral circulation but constitute a major T cell population at other anatomical localizations such as the epithelial tissues In contrast to conventional T cells the available number of germline genes coding for T cell receptor TCR variable elements of T cells is very small Moreover there is a preferential localization of T cells expressing given Vgamma and Vdelta genes in certain tissues In humans T cells expressing the Vg9Vd2 encoded TCR account for anywhere between 50 and 95% of peripheral blood T cells whereas cells expressing non Vd2 genes dominate in mucosal tissues In mice there is an ordered appearance of T cell waves during embryonic development resulting in preferential localization of T cells expressing distinct VgammaVdelta genes in the skin the reproductive organs or gut epithelia The major function of T cells resides in local immunosurveillance and immune defense against infection and malignancy This is supported by the identification of ligands that are selectively recognized by the TCR As an example human Vgamma9Vdelta2 T cells recognize phosphorylated metabolites phosphoantigens that are secreted by many pathogens but can also be overproduced by tumor cells providing a basis for a role of these T cells in both anti infective and anti tumor immunity Similarly the recognition of endothelial protein C receptor by human non Vdelta2 T cells has recently been identified to provide a link for the role for such T cells in immunity against epithelial tumor cells and cytomegalovirus

infected endothelial cells In addition to classical functions such as cytokine production and cytotoxicity recent studies suggest that subsets of T cells can exert additional functions such as regulatory activity and quite surprisingly professional antigen presenting capacity It is currently not well known how this tremendous extent of functional plasticity is regulated and what is the extent of TCR ligand diversity Due to their non MHC restricted recognition of unusual stress associated ligands T cells have raised great interest as to their potential translational application in cell based immunotherapy Topics of this Research Focus include Molecular insights into the activation and differentiation requirements of T cells role of pyrophosphates and butyrophilin molecules for the activation of human T cells role of T cells in tumor immunity and in other infectious and non infectious diseases and many others We are most grateful to all colleagues who agreed to write a manuscript Thanks to their contributions this E book presents an up to date overview on many facets of the still exciting T cells Dieter Kabelitz Julie D chanet Merville
